Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Aims أهداف المادة الدراسية</p>	<p>Here are some module aims typically associated with a Programming I course. These aims describe the overarching goals and objectives of the course:</p> <ol style="list-style-type: none">1. This course covers fundamentals of algorithms and give the students an opportunity to write the algorithms.2. In this course the students can easily know how to draw flowcharts to describe the algorithms.3. The programming aims to learn how to solve problem.4. This course covers programming concepts and write codes.5. Also after this course the students will know how to control structures and function
<p>Module Learning Outcomes مخرجات التعلم للمادة الدراسية</p>	<p>Here are some module learning outcomes that are typically associated with a Programming I course. These outcomes represent the knowledge, skills, and competencies that students are expected to achieve upon completing the course:</p> <ol style="list-style-type: none">1. Develop algorithms to solve "computer-solvable" problems.2. Test algorithms.3. Translate algorithms to C++ programs.4. Debug, run and test C++ "procedural" programs
<p>Indicative Contents المحتويات الإرشادية</p>	<p>Here are some indicative contents for a programming I course targeted at beginners. These contents cover the fundamental concepts and topics typically included in such a course:</p> <ul style="list-style-type: none">• Problem solving• Algorithms• What is programming?• Basic elements of C++• General Form of a C++ Program<ul style="list-style-type: none">• Comments• Reserved Words• Identifiers• Variables and constant• Data Types• Arithmetic Operators and Operator Precedence• Expressions• Assignment Statement• Declaring and Initializing Variables• Input and output• Control Structures<ul style="list-style-type: none">• Relational Operators and precedence• Selection<ul style="list-style-type: none">• Selection: if and if...else• Compound (Block of) Statements• Multiple Selections: Nested if• Selection: Switch case

	<ul style="list-style-type: none"> • Repetition <ul style="list-style-type: none"> • for Looping Structure • User-defined functions • Function declarations and call • Scope rule of an Identifier

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	When teaching a programming I course to beginners, it's important to adopt strategies that cater to their foundational understanding and gradually build their knowledge and skills. Here are some effective learning and teaching strategies for beginners in a Programming I course:
-------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Student Workload (SWL)

الحمل الدراسي للطالب

Structured SWL (h/sem) الحمل الدراسي المنتظم للطالب خلال الفصل	45	Structured SWL (h/w) الحمل الدراسي المنتظم للطالب أسبوعياً	
Unstructured SWL (h/sem) الحمل الدراسي غير المنتظم للطالب خلال الفصل	80	Unstructured SWL (h/w) الحمل الدراسي غير المنتظم للطالب أسبوعياً	
Total SWL (h/sem) الحمل الدراسي الكلي للطالب خلال الفصل	125		

Module Evaluation

تقييم المادة الدراسية

		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	2	10% (10)	5, 10	LO #1, 2, 10 and 11
	Assignments	2	10% (10)	2, 12	LO # 3, 4, 6 and 7
	Projects / Lab.	1	10% (10)	Continuous	
	Report	1	10% (10)	13	LO # 5, 8 and 10
Summative assessment	Midterm Exam	2 hr	10% (10)	7	LO # 1-7
	Final Exam	2 hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

المنهاج الأسبوعي النظري

	Material Covered
Week 1	Problem solving Algorithms What is programming?
Week 2	Basic elements of C++ General Form of a C++ Program Comments
Week 3	Reserved Words Identifiers Variables and constant Data Types
Week 4	Arithmetic Operators and Operator Precedence Expressions
Week 5	Assignment Statement Declaring and Initializing Variables
Week 6	Input and output
Week 7	Control Structures Relational Operators and precedence
Week 8	Selection Selection: if and if...else
Week 9	Compound (Block of) Statements
Week 10	Multiple Selections: Nested if
Week 11	Selection: Switch case
Week 12	Repetition for Looping Structure
Week 13	User-defined functions Function declarations and call
Week 14	User-defined functions Function declarations and call
Week 15	General Discussion
Week 16	Preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

	Material Covered
Week 1	Lab 1: Basic elements of C++
Week 2	Lab 2: Variables and constant
Week 3	Lab 3: Expressions
Week 4	Lab 4: Declaring and Initializing Variables
Week 5	Lab 5: : if and if...else
Week 6	Lab 6: Switch case
Week 7	Lab 7: for Looping

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX – Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F – Fail	راسب	(0-44)	Considerable amount of work required

--	--	--	--	--

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Objectives</p> <p>أهداف المادة الدراسية</p>	<p>-Cognitive Goals</p> <ol style="list-style-type: none"> 1. Upon Successful completion of this subject, students should : 2. Be able to use algebra accurately; 3. Be able to plot and interpret graphs 4. Be able to use exponential, logarithm, and trigonometric functions in applications; 5. Be able to calculate the sums of arithmetic and geometric series and use them in simple financial calculations; 6. Be able to use basic rules of differentiation and calculate derivatives of simple functions; 7. Be able to use matrix in solving linear system of equations; <p>-Skill goals</p> <ol style="list-style-type: none"> 1. Enable the student to refer the mathematical problem to a program and find a solution through the computer. 2. Student realization of the close relationship between mathematical problems and computer programs
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>Important: Write at least 6 Learning Outcomes, better to be equal to the number of study weeks.</p> <ol style="list-style-type: none"> 1. This subject is designed for students who enter university without a strong background in mathematics 2. It is also for students who are planning to enroll in subjects requiring basic numeracy skills such as sciences, computing and information technology. 3. The subject reinforces calculation skills, basic algebra . 4. This subject is designed to work with formula. 5. It is also to use applications of exponential and logarithmic functions. 6. It is designed how applying matric to solve linear system of equations.
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<p>Indicative content includes the following.</p> <p>Part A – Sequences and series</p> <p><u>Sequence</u> is a function whose domain is the set of natural numbers. The terms of the sequence are the function values. There will be studied two types of</p>

sequences: arithmetic and geometric sequences with their partial sums. While series means that the infinite sum of geometric sequence. [12 hrs]

Part B – Matrices

Matrices are simply a rectangular array of numbers with **m** rows and **n** columns . There will be studied some: types of matrices, algebra of matrices. It is also studied how to find inverse of matrix, how to use matrix and its inverse to solve linear system of equations, how to find determinant of matrix and use it to solve linear system of equations. [12 hrs]

Part C – Derivatives and integrals

Derivatives mean that if $f: x \rightarrow y$ is a function, the derivative of a function f at a point x_0 written $f'(x_0)$; is given by

$f'(x_0) = \lim_{x \rightarrow x_0} \frac{f(x) - f(x_0)}{x - x_0}$, If this limit exists and finite. There will be studied the derivatives of usual functions, implicit derivatives, derivatives of trigonometric functions, derivatives of exponential and logarithm functions. Graphical of exponential and logarithm functions. While integrals means that if $f(x)$ function defined at some interval, let $F(x)$ be another function such that $F'(x) = f(x)$, $F(x)$ called an infinite integral of $f(x)$ and is written as the following form $\int f(x)dx = F(x) + C$. [12 hrs].

Part D – Interest

Interest is the rental fee charged by a lender to a business or an individual for the use of money . There will be studied simple and compound interests. Simple interest means that the interest is calculated *only once* for the entire time period of the loan. At the end of the time period, the borrower repays the principal plus the Interest . while compound interest means that means that the interest is calculated more than once during the time period of the loan. [9 hrs].

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies

1.Explain the topic in detail by the teacher by writing the topic and explaining it on the board and other teaching aids

	2. Discussion during the lecture period 3. Doing homework 4. See the websites of the subject

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Objectives</p> <p>أهداف المادة الدراسية</p>	<p>This course aims at teaching students how to use a variety of computer applications as tools to improve students' performance in school, increase their future productivity in the work place and enhance their level of critical thinking. Students will use computer networks and applications to locate, evaluate, and use information, create written documents and oral presentations. This course will assist students in understanding the underlying concepts of these technologies and provide project-oriented learning opportunities. The goal is for students to become independent users of information, computer technology and library resources.</p>
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>The student will acquire fundamental computer skills that can be effectively applied to data processing and presentation tasks. This includes gaining proficiency in essential computer operations, such as file management, utilizing productivity tools, and navigating digital interfaces. Through practical application, the student will develop the ability to handle and manipulate data, as well as create compelling presentations.</p>
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<ol style="list-style-type: none"> 1. Introduction to the computer <ul style="list-style-type: none"> - Basic components of a computer (monitor, CPU, storage, etc.) - Keyboard vs. mouse - Desktop vs. laptop - Activity: power off/on computers 2. Introduction to Windows <ul style="list-style-type: none"> - Desktop (icons, Start button, taskbar) - Cursor/mouse - Activity: click & drag desktop icons - Programs (3 ways to start programs: icon, Start, All Programs) 3. Typing

4. Windows Navigation

- Window features (minimize, resize, exit, click & drag)
- Menu bar (drop-down arrow)
- Tool bar (icons) (roll cursor over to ID)
- Scrolling
- Multiple ways to do the same thing (menu, icon, keyboard)

5. Word

- How to open Word (icon, Start menu, All Programs)
- What is a "document"
- Using the cursor with text (how to position, different types of cursor)
- Review menu bar and tool bar
- Using the keyboard with text (arrows, backspace, delete, tab, shift, space, enter keys)
- Highlighting text (click & drag, full line from margin, edit/select all)
- Requirement to highlight text for formatting commands
- Formatting commands (Bold/Italicize/Underline, show as "on/off" icons)
- Font size, Font type (review drop-down arrow)
- Text color, Text highlight (review drop-down arrow)
- Alignment (left, center, right)
- Undo/Redo
- Spell check (by the word, by the document)
- Find/replace
- Bullets/numbers
- Review Windows Navigation (lesson 6)
- Copy/cut/paste

6. Excel

- Introduction to Excel (cells, row, column)
- Tables
- Basic Excel formulas

7. Windows File Management

	<ul style="list-style-type: none"> - Options for storage (internal drive, flash drive, CD/DVD) - Introduce Flash Drive - Files and Folders - My Computer - Save As, Save and Exit without changes <p>8. Internet Navigation</p> <ul style="list-style-type: none"> - What is the Internet - What is a Web Browser - Links and navigation bars - Back & forward arrow buttons, home button - Address bar (how to use the website address/URL in the address bar) <p>9. Internet Search</p> <ul style="list-style-type: none"> - How to start a web browser (Mozilla Firefox or Internet Explorer) - Getting to Google (toolbars, search box, other Google features) - Job search <p>10. EMAIL</p> <ul style="list-style-type: none"> - Open new email - Send emails (attachment, text...)
--	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<p>Learning and Teaching Strategies</p> <p>استراتيجيات التعلم والتعليم</p>	
Strategies	<p>The primary approach for delivering this module will focus on fostering active student engagement in exercises, while simultaneously enhancing their critical thinking abilities. This will be accomplished through a combination of classroom and laboratory sessions, interactive tutorials, and the incorporation of captivating sampling activities to facilitate hands-on learning experiences for the students.</p>

Week 4	<ul style="list-style-type: none"> ✓ Word Processing • Referencing • Enhancing Productivity • Collaborative Editing
Week 5	<ul style="list-style-type: none"> ✓ Spreadsheets • Using the Application • Cells • Managing Worksheets • Formulas and Functions
Week 6	<ul style="list-style-type: none"> ✓ Spreadsheets • Formatting • Charts • Prepare Outputs • Analysis
Week 7	<ul style="list-style-type: none"> ✓ Spreadsheets • Validating and Auditing • Enhancing Productivity • Collaborative Editing
Week 8	Mid-term Exam
Week 9	<ul style="list-style-type: none"> ✓ Presentation • Using the Application • Developing a Presentation • Text • Charts and Diagrams
Week 10	<ul style="list-style-type: none"> ✓ Presentation • Graphical Objects • Prepare Outputs • Presentation Planning • Slide Masters and Templates
Week 11	<ul style="list-style-type: none"> ✓ Presentation • Multimedia • Enhancing Productivity • Managing Presentations

Week 12	<ul style="list-style-type: none"> ✓ Online Essentials • Web Browsing Concepts • Web Browsing
Week 13	<ul style="list-style-type: none"> ✓ Online Essentials • Web-Based Information • Communication Concepts • Using E-mail
Week 14	<ul style="list-style-type: none"> ✓ Visio • Using the Application • Creating Technical Layouts
Week 15	<ul style="list-style-type: none"> ✓ Visio • Exploring Advanced Diagrams • Diagramming and Data • Advanced Custom Shape Design

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

	Material Covered
Week 1	<ol style="list-style-type: none"> 1. Operating System: <ul style="list-style-type: none"> • Familiarization with the chosen operating system • Navigating through the desktop, taskbar, and start menu 2. File Management: <ul style="list-style-type: none"> • Creating, renaming, copying, moving, and deleting files and folders • Sorting and organizing files based on different criteria 3. Utilities: <ul style="list-style-type: none"> • Exploring system utilities for maintenance tasks • Performing basic optimization tasks for computer performance 4. Print Management: <ul style="list-style-type: none"> • Setting up and configuring printers • Printing documents and adjusting print settings
Week 2	<ol style="list-style-type: none"> 1. Using the Application: <ul style="list-style-type: none"> • Opening the word processing application • Exploring the user interface and menus 2. Document Creation: <ul style="list-style-type: none"> • Creating and saving a new document • Opening an existing document 3. Formatting: <ul style="list-style-type: none"> • Applying font styles, sizes, and colors • Adjusting paragraph alignment • Adding bullet points or numbering • Applying basic text formatting (bold, italic, underline)
Week 3	<ol style="list-style-type: none"> 1. Objects: <ul style="list-style-type: none"> • Inserting and formatting images and shapes • Adjusting object size and position • Applying borders and shading 2. Mail Merge: <ul style="list-style-type: none"> • Creating a data source with recipient information • Designing a template with placeholders

	<ul style="list-style-type: none"> • Performing a mail merge to generate personalized documents • Previewing and editing merged documents <p>3. Prepare Outputs:</p> <ul style="list-style-type: none"> • Formatting documents for printing • Setting up headers, footers, and page numbers • Adding tables of contents or indexes • Creating PDF or electronic document formats
Week 4	<p>1. Referencing:</p> <ul style="list-style-type: none"> • Adding citations and creating a bibliography • Inserting footnotes or endnotes <p>2. Enhancing Productivity:</p> <ul style="list-style-type: none"> • Using shortcuts and keyboard commands for faster editing • Customizing the user interface and toolbar <p>3. Collaborative Editing:</p> <ul style="list-style-type: none"> • Enabling track changes and reviewing document revisions • Inserting comments and resolving conflicts
Week 5	<p>1. Using the Application:</p> <ul style="list-style-type: none"> • Navigating the spreadsheet application • Exploring different toolbars and options <p>2. Cells:</p> <ul style="list-style-type: none"> • Entering and formatting data in cells • Adjusting cell alignment and text wrapping <p>3. Managing Worksheets:</p> <ul style="list-style-type: none"> • Creating, renaming, and deleting worksheets • Moving and copying worksheets <p>4. Formulas and Functions:</p> <ul style="list-style-type: none"> • Writing basic formulas for calculations • Using common functions (e.g., sum, average, count) • Referencing cells in formulas
Week 6	<p>1. Formatting:</p> <ul style="list-style-type: none"> • Formatting cell content • Applying conditional formatting <p>2. Charts:</p> <ul style="list-style-type: none"> • Creating charts • Customizing chart elements <p>3. Prepare Outputs:</p> <ul style="list-style-type: none"> • Setting up print areas • Saving and sharing spreadsheets <p>4. Analysis:</p> <ul style="list-style-type: none"> • Using functions for data analysis • Sorting and filtering data
Week 7	<p>1. Validating and Auditing:</p> <ul style="list-style-type: none"> • Setting data validation rules • Auditing formulas for errors <p>2. Enhancing Productivity:</p> <ul style="list-style-type: none"> • Using shortcuts for efficient navigation • Utilizing autofill and templates <p>3. Collaborative Editing:</p> <ul style="list-style-type: none"> • Tracking changes by multiple users • Inserting comments
Week8	Lab Exam
Week9	<p>1. Using the Application:</p> <ul style="list-style-type: none"> • Navigating the presentation application • Exploring different toolbars and options <p>2. Developing a Presentation:</p>

	<ul style="list-style-type: none"> • Creating slides and selecting layouts • Adding and arranging content (text, images, shapes) • Applying themes and customizing backgrounds <p>3. Text:</p> <ul style="list-style-type: none"> • Formatting text (font, size, color) • Aligning and spacing text on slides <p>4. Charts:</p> <ul style="list-style-type: none"> • Inserting and formatting charts • Adding labels and titles to charts
Week10	<p>1. Graphical Objects:</p> <ul style="list-style-type: none"> • Inserting and manipulating graphical objects • Applying effects and styles to graphics • Arranging and aligning graphical objects on slides <p>2. Prepare Outputs:</p> <ul style="list-style-type: none"> • Setting up slide layouts and design elements • Configuring slide transitions and animations <p>3. Presentation Planning:</p> <ul style="list-style-type: none"> • Outlining the structure and content of the presentation • Determining key messages and visuals for each slide <p>4. Slide Masters and Templates:</p> <ul style="list-style-type: none"> • Modifying slide masters for consistent design • Creating and applying slide templates
Week11	<p>1. Multimedia:</p> <ul style="list-style-type: none"> • Inserting and managing multimedia elements (videos, audio, animations) • Configuring playback settings for multimedia • Syncing multimedia with slide transitions <p>2. Enhancing Productivity:</p> <ul style="list-style-type: none"> • Utilizing shortcuts and productivity features • Using slide layouts and templates • Applying design themes for visual appeal <p>3. Managing Presentations:</p> <ul style="list-style-type: none"> • Organizing and managing slides • Rearranging slide order • Configuring slide show settings
Week12	<p>1. Web Browsing Concepts:</p> <ul style="list-style-type: none"> • Understanding the basics of web browsing • Exploring different web browsers and their features • Learning about search engines and their functionalities <p>2. Web Browsing:</p> <ul style="list-style-type: none"> • Opening a web browser and navigating to websites • Using bookmarks and favourites to save and access web pages • Exploring tabs and managing multiple web pages
Week13	<p>1. Web-Based Information:</p> <ul style="list-style-type: none"> • Searching and accessing information from websites • Evaluating online source reliability • Bookmarking useful websites <p>2. Communication Concepts:</p> <ul style="list-style-type: none"> • Understanding online communication forms • Practicing netiquette and online etiquette • Recognizing online communication risks <p>3. Using E-mail:</p> <ul style="list-style-type: none"> • Composing and sending emails • Managing email folders • Attaching files and formatting emails
Week14	<p>1. Using the Application:</p> <ul style="list-style-type: none"> • Opening and navigating the Visio application

	<ul style="list-style-type: none"> • Exploring the user interface and toolbars • Familiarizing with various Visio features and options <p>2. Creating Technical Layouts:</p> <ul style="list-style-type: none"> • Creating and arranging shapes on a drawing canvas • Adding connectors and lines to create flowcharts or diagrams <p>Applying formatting and styles to enhance the visual appearance</p>
Week15	<p>1. Exploring Advanced Diagrams:</p> <ul style="list-style-type: none"> • Creating complex diagrams with advanced shapes and connectors • Using templates and stencils for specific diagram types • Incorporating advanced features like layers and callouts <p>2. Diagramming and Data:</p> <ul style="list-style-type: none"> • Importing and linking external data to create data-driven diagrams • Customizing data visuals and applying data graphics • Creating organizational charts or network diagrams with data connectivity <p>3. Advanced Custom Shape Design:</p> <ul style="list-style-type: none"> • Creating and modifying custom shapes using shape creation tools • Enhancing existing shapes to meet specific requirements • Utilizing shape behaviours and metadata for enhanced functionality

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks %	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group	FX – Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded

(0 – 49)	F – Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	This course aims at teaching students how to use a variety of computer applications as tools to improve students' performance in school, increase their future productivity in the work place and enhance their level of critical thinking. Students will use computer networks and applications to locate, evaluate, and use information, create written documents and oral presentations. This course will assist students in understanding the underlying concepts of these technologies and provide project-oriented learning opportunities. The goal is for students to become independent users of information, computer technology and library resources.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	The student will acquire fundamental computer skills that can be effectively applied to data processing and presentation tasks. This includes gaining proficiency in essential computer operations, such as file management, utilizing productivity tools, and navigating digital interfaces. Through practical application, the student will develop the ability to handle and manipulate data, as well as create compelling presentations.
Indicative Contents المحتويات الإرشادية	<p>The course will build on your existing user-level knowledge and experience with personal computer software and hardware to present fundamental skills and concepts that you will use on the job.</p> <p>In this course, you will acquire the essential skills and information you will need to install, upgrade, repair, configure, troubleshoot, optimize, and perform preventative maintenance of basic personal computer hardware and operating systems</p> <p>This course will:</p> <p>Help acquires the essential skills and information needed to install, upgrade, repair, configure, troubleshoot, optimize, and perform preventative maintenance of basic personal computer hardware and operating systems.</p> <p>Assist you in preparing to take the CompTIA A+ certification Examinations</p>

Identify network technologies.

Install and manage network connections.

Support laptops and portable computing devices.

Support printers and scanners.

Identify personal computer security concepts.

Support personal computer security

1- In this session, you will learn to:

2- Identify the major components of personal computers.

3- Identify the major components of the system unit.

4- Identify the various types of storage devices used in personal computers.

6- Identify personal computer connection methods

2- In this session, you will learn to:

Identify the major personal computer operating systems.

Identify the primary components of the Windows user interface.

Identify the primary tools and functions used in Windows file system management.

Identify Windows system management tools.

3- In this session, you will learn to:

Identify common hardware and software tools used by professional personal computer technicians.

Identify the best practices for PC technicians to follow to promote electrical safety.

Identify the best practices for PC technicians to follow to promote environmental safety and proper handling of materials.

Identify and apply the general preventative maintenance best

practices that PC technicians should employ.

Identify the general diagnostics and troubleshooting best

practices that PC technicians should employ.

Identify best practices for PC technicians to use to

communicate appropriately with clients and colleagues and

conduct business in a professional manner

3- In this session, you will learn to:

Identify common hardware and software tools used by

professional personal computer technicians.

Identify the best practices for PC technicians to follow to

promote electrical safety.

Identify the best practices for PC technicians to follow to

promote environmental safety and proper handling of

materials.

Identify and apply the general preventative maintenance best

practices that PC technicians should employ.

Identify the general diagnostics and troubleshooting best

practices that PC technicians should employ.

Identify best practices for PC technicians to use to

communicate appropriately with clients and colleagues and

conduct business in a professional manner

4- In this session, you will learn to:

Install and configure display devices.

Install and configure input devices.

Install and configure adapter cards.

Install multimedia devices

5- In this session, you will learn to:

Select, install, and configure storage devices.

Install and configure power supplies.

Install and configure memory.

Install and configure CPUs.

Install and configure system boards.

6-In this session, you will learn to:

Test and troubleshoot display devices.

Maintain and troubleshoot input devices.

Test and troubleshoot adapter cards.

Troubleshoot multimedia devices.

Troubleshoot storage devices

7-In this session, you will learn to:

Test and troubleshoot power supplies.

Test and troubleshoot memory.

Test and troubleshoot CPUs.

Test and troubleshoot system boards

8-In this session, you will learn to:

Install Microsoft Windows.

Upgrade Windows from a given version to a later version.

Add devices to an installation of Microsoft Windows.

Optimize an installation of Microsoft Windows

9-In this session, you will learn to:

Identify Windows operating system utilities to use in maintenance and troubleshooting.

Perform backups.

Troubleshoot Windows.

Recover a damaged installation of Windows

10-In this session, you will learn to:

Identify fundamental concepts of computer networks.

Identify network communications technologies.

Identify network connectivity technologies.

Identify Internet technologies

11-In this session, you will learn to:

Create network connections.

Install and configure web browsers.

Maintain and troubleshoot network connections.

Identify components that are specialized for laptops and portable computing devices.

12-In this session, you will learn to:

Install and configure laptops and portable computing devices.

Maintain and troubleshoot laptops and portable computing devices.

Identify major types of printer and scanner technologies

13-In this session, you will learn to:

Identify the technical components of printers and scanners.

Identify printing and scanning processes.

Install and configure printers and scanners.

Maintain and troubleshoot printers and scanners

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The primary approach for delivering this module will focus on fostering active student engagement in exercises, while simultaneously enhancing their critical thinking abilities. This will be accomplished through a combination of classroom and laboratory sessions, interactive tutorials, and the incorporation of captivating sampling activities to facilitate hands-on learning experiences for the students.
-------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Student Workload (SWL)

الحمل الدراسي للطالب محسوب لـ ١٥ أسبوعا

Structured SWL (h/sem) الحمل الدراسي المنتظم للطالب خلال الفصل	77	Structured SWL (h/w) الحمل الدراسي المنتظم للطالب أسبوعيا	4
Unstructured SWL (h/sem) الحمل الدراسي غير المنتظم للطالب خلال الفصل	98	Unstructured SWL (h/w) الحمل الدراسي غير المنتظم للطالب أسبوعيا	5
Total SWL (h/sem) الحمل الدراسي الكلي للطالب خلال الفصل	175		

Module Evaluation

تقييم المادة الدراسية

		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	2	10% (10)	5 and 10	LO #1, #2 and #10, #11
	Assignments	2	10% (10)	2 and 12	LO #3, #4 and #6, #7
	Projects / Lab.	1	10% (10)	Continuous	All

	Report	1	10% (10)	13	LO #5, #8 and #10
Summative assessment	Midterm Exam	2hr	10% (10)	7	LO #1 - #7
	Final Exam	3hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	<ul style="list-style-type: none"> ✓ • Identify the major components of personal computers. • Identify the major components of the system unit. • Identify the various types of storage devices used in personal computers. • Identify personal computer connection methods •
Week 2	<ul style="list-style-type: none"> • Identify the major personal computer operating systems. • Identify the primary components of the Windows user interface. • Identify the primary tools and functions used in Windows file system management. • Identify Windows system management tools.
Week 3	<ul style="list-style-type: none"> • Identify common hardware and software tools used by professional personal computer technicians. • Identify the best practices for PC technicians to follow to promote electrical safety. • Identify the best practices for PC technicians to follow to promote environmental safety and proper handling of materials. • Identify and apply the general preventative maintenance best practices that PC technicians should employ. • Identify the general diagnostics and troubleshooting best practices that PC technicians should employ. • Identify best practices for PC technicians to use to communicate appropriately with clients and colleagues and conduct business in a professional manner
Week 4	<ul style="list-style-type: none"> • Install and configure display devices. • Install and configure input devices. • Install and configure adapter cards.

	<ul style="list-style-type: none"> • Install multimedia devices
Week 5	<ul style="list-style-type: none"> • Select, install, and configure storage devices. • Install and configure power supplies. • Install and configure memory. • Install and configure CPUs. • Install and configure system boards.
Week 6	<ul style="list-style-type: none"> • Test and troubleshoot display devices. • Maintain and troubleshoot input devices. • Test and troubleshoot adapter cards. • Troubleshoot multimedia devices. • Troubleshoot storage devices
Week 7	<ul style="list-style-type: none"> • Test and troubleshoot power supplies. • Test and troubleshoot memory. • Test and troubleshoot CPUs. • Test and troubleshoot system boards
Week 8	Mid-term Exam
Week 9	<ul style="list-style-type: none"> • Install Microsoft Windows. • Upgrade Windows from a given version to a later version. • Add devices to an installation of Microsoft Windows. • Optimize an installation of Microsoft Windows
Week 10	<ul style="list-style-type: none"> • Identify Windows operating system utilities to use in maintenance and troubleshooting. • Perform backups. • Troubleshoot Windows. • Recover a damaged installation of Windows
Week 11	<ul style="list-style-type: none"> • Identify fundamental concepts of computer networks. • Identify network communications technologies. • Identify network connectivity technologies. • Identify Internet technologies
Week 12	<ul style="list-style-type: none"> • Create network connections. • Install and configure web browsers. • Maintain and troubleshoot network connections. • Identify components that are specialized for laptops and portable computing devices.
Week 13	<ul style="list-style-type: none"> • Install and configure laptops and portable computing devices. • Maintain and troubleshoot laptops and portable computing devices. • Identify major types of printer and scanner technologies
Week 14	<ul style="list-style-type: none"> • Install and configure laptops and portable computing devices. • Maintain and troubleshoot laptops and portable computing devices. • Identify major types of printer and scanner technologies

Week 15	<ul style="list-style-type: none"> • Identify the technical components of printers and scanners. • Identify printing and scanning processes. • Install and configure printers and scanners. • Maintain and troubleshoot printers and scanners

<p>Delivery Plan (Weekly Lab. Syllabus)</p> <p>المنهاج الاسبوعي للمختبر</p>

	Material Covered
Week 1	<ol style="list-style-type: none"> 1. Operating System: <ul style="list-style-type: none"> • Familiarization with the chosen operating system • Navigating through the desktop, taskbar, and start menu 2. File Management: <ul style="list-style-type: none"> • Creating, renaming, copying, moving, and deleting files and folders • Sorting and organizing files based on different criteria 3. Utilities: <ul style="list-style-type: none"> • Exploring system utilities for maintenance tasks • Performing basic optimization tasks for computer performance 4. Print Management: <ul style="list-style-type: none"> • Setting up and configuring printers • Printing documents and adjusting print settings
Week 2	<ol style="list-style-type: none"> 1. Using the Application: <ul style="list-style-type: none"> • Opening the word processing application • Exploring the user interface and menus 2. Document Creation: <ul style="list-style-type: none"> • Creating and saving a new document • Opening an existing document 3. Formatting: <ul style="list-style-type: none"> • Applying font styles, sizes, and colors • Adjusting paragraph alignment • Adding bullet points or numbering • Applying basic text formatting (bold, italic, underline)
Week 3	<ol style="list-style-type: none"> 1. Objects: <ul style="list-style-type: none"> • Inserting and formatting images and shapes • Adjusting object size and position • Applying borders and shading 2. Mail Merge: <ul style="list-style-type: none"> • Creating a data source with recipient information • Designing a template with placeholders • Performing a mail merge to generate personalized documents • Previewing and editing merged documents 3. Prepare Outputs: <ul style="list-style-type: none"> • Formatting documents for printing • Setting up headers, footers, and page numbers • Adding tables of contents or indexes • Creating PDF or electronic document formats
Week 4	<ol style="list-style-type: none"> 1. Referencing: <ul style="list-style-type: none"> • Adding citations and creating a bibliography • Inserting footnotes or endnotes 2. Enhancing Productivity: <ul style="list-style-type: none"> • Using shortcuts and keyboard commands for faster editing • Customizing the user interface and toolbar

	<ol style="list-style-type: none"> 3. Collaborative Editing: <ul style="list-style-type: none"> • Enabling track changes and reviewing document revisions • Inserting comments and resolving conflicts
Week 5	<ol style="list-style-type: none"> 1. Using the Application: <ul style="list-style-type: none"> • Navigating the spreadsheet application • Exploring different toolbars and options 2. Cells: <ul style="list-style-type: none"> • Entering and formatting data in cells • Adjusting cell alignment and text wrapping 3. Managing Worksheets: <ul style="list-style-type: none"> • Creating, renaming, and deleting worksheets • Moving and copying worksheets 4. Formulas and Functions: <ul style="list-style-type: none"> • Writing basic formulas for calculations • Using common functions (e.g., sum, average, count) • Referencing cells in formulas
Week 6	<ol style="list-style-type: none"> 1. Formatting: <ul style="list-style-type: none"> • Formatting cell content • Applying conditional formatting 2. Charts: <ul style="list-style-type: none"> • Creating charts • Customizing chart elements 3. Prepare Outputs: <ul style="list-style-type: none"> • Setting up print areas • Saving and sharing spreadsheets 4. Analysis: <ul style="list-style-type: none"> • Using functions for data analysis • Sorting and filtering data
Week 7	<ol style="list-style-type: none"> 1. Validating and Auditing: <ul style="list-style-type: none"> • Setting data validation rules • Auditing formulas for errors 2. Enhancing Productivity: <ul style="list-style-type: none"> • Using shortcuts for efficient navigation • Utilizing autofill and templates 3. Collaborative Editing: <ul style="list-style-type: none"> • Tracking changes by multiple users • Inserting comments
Week8	Lab Exam
Week9	<ol style="list-style-type: none"> 1. Using the Application: <ul style="list-style-type: none"> • Navigating the presentation application • Exploring different toolbars and options 2. Developing a Presentation: <ul style="list-style-type: none"> • Creating slides and selecting layouts • Adding and arranging content (text, images, shapes) • Applying themes and customizing backgrounds 3. Text: <ul style="list-style-type: none"> • Formatting text (font, size, color) • Aligning and spacing text on slides 4. Charts: <ul style="list-style-type: none"> • Inserting and formatting charts • Adding labels and titles to charts
Week10	<ol style="list-style-type: none"> 1. Graphical Objects: <ul style="list-style-type: none"> • Inserting and manipulating graphical objects • Applying effects and styles to graphics • Arranging and aligning graphical objects on slides

	<ol style="list-style-type: none"> 2. Prepare Outputs: <ul style="list-style-type: none"> • Setting up slide layouts and design elements • Configuring slide transitions and animations 3. Presentation Planning: <ul style="list-style-type: none"> • Outlining the structure and content of the presentation • Determining key messages and visuals for each slide 4. Slide Masters and Templates: <ul style="list-style-type: none"> • Modifying slide masters for consistent design • Creating and applying slide templates
Week11	<ol style="list-style-type: none"> 1. Multimedia: <ul style="list-style-type: none"> • Inserting and managing multimedia elements (videos, audio, animations) • Configuring playback settings for multimedia • Syncing multimedia with slide transitions 2. Enhancing Productivity: <ul style="list-style-type: none"> • Utilizing shortcuts and productivity features • Using slide layouts and templates • Applying design themes for visual appeal 3. Managing Presentations: <ul style="list-style-type: none"> • Organizing and managing slides • Rearranging slide order • Configuring slide show settings
Week12	<ol style="list-style-type: none"> 1. Web Browsing Concepts: <ul style="list-style-type: none"> • Understanding the basics of web browsing • Exploring different web browsers and their features • Learning about search engines and their functionalities 2. Web Browsing: <ul style="list-style-type: none"> • Opening a web browser and navigating to websites • Using bookmarks and favourites to save and access web pages • Exploring tabs and managing multiple web pages
Week13	<ol style="list-style-type: none"> 1. Web-Based Information: <ul style="list-style-type: none"> • Searching and accessing information from websites • Evaluating online source reliability • Bookmarking useful websites 2. Communication Concepts: <ul style="list-style-type: none"> • Understanding online communication forms • Practicing netiquette and online etiquette • Recognizing online communication risks 3. Using E-mail: <ul style="list-style-type: none"> • Composing and sending emails • Managing email folders • Attaching files and formatting emails
Week14	<ol style="list-style-type: none"> 1. Using the Application: <ul style="list-style-type: none"> • Opening and navigating the Visio application • Exploring the user interface and toolbars • Familiarizing with various Visio features and options 2. Creating Technical Layouts: <ul style="list-style-type: none"> • Creating and arranging shapes on a drawing canvas • Adding connectors and lines to create flowcharts or diagrams <p>Applying formatting and styles to enhance the visual appearance</p>
Week15	<ol style="list-style-type: none"> 1. Exploring Advanced Diagrams: <ul style="list-style-type: none"> • Creating complex diagrams with advanced shapes and connectors • Using templates and stencils for specific diagram types • Incorporating advanced features like layers and callouts 2. Diagramming and Data: <ul style="list-style-type: none"> • Importing and linking external data to create data-driven diagrams

	<ul style="list-style-type: none"> • Customizing data visuals and applying data graphics • Creating organizational charts or network diagrams with data connectivity <p>3. Advanced Custom Shape Design:</p> <ul style="list-style-type: none"> • Creating and modifying custom shapes using shape creation tools • Enhancing existing shapes to meet specific requirements • Utilizing shape behaviours and metadata for enhanced functionality

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks %	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX – Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F – Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes, and Indicative Contents	
Module Aims	<p>This course is an introductory survey of artificial intelligence. The course will cover the history, theory, and computational methods of artificial intelligence. Basic concepts include Logic, Theorem-Proving, knowledge representation and reasoning, AI search techniques, and Problems Solving. One or two application areas will be studied, selected from expert systems, robotics, computer vision, natural language understanding, and planning.</p>
Module Learning Outcomes	<p>Provide the student with key vocabulary and help to understand artificial intelligence and expert systems by:</p> <ul style="list-style-type: none"> • Understand artificial intelligence and expert systems and apply their basic concepts.

	<ul style="list-style-type: none"> • Realizing the importance of artificial intelligence and expert systems in practical life • Developing the concepts of artificial intelligence and expert systems and trying to reach new concepts.
<p>Indicative Contents</p>	<p>Indicative content includes the following.</p> <p><u>Theoretical direction</u></p> <p>Explain the foundations of Artificial intelligence (AI). Where AI represents the behavior of specific characteristics of the program that make it simulate human mental capabilities and work patterns. Among the most important characteristics is the ability to learn, reason, and react to a situation that is not programmed into the machine.. [6 hrs]</p> <p>Knowledge representation: To create programs with "intelligent" qualities, developing techniques for representing knowledge is necessary. Unlike people, computers cannot acquire knowledge on their own. The AI programs use knowledge structures to describe objects, facts, rules, relationships, and procedures. The primary function of the knowledge structure is to provide the needed expertise and information so that a program can operate intelligently. Knowledge structures usually comprise traditional data structures and other complex structures such as Logical frames, scripts, semantic networks, conceptual graphs, and ATN(augment transition network. [9 hrs]</p> <p>Automatic Theorem Proving: It's called the Resolution technique for theorem proving in propositional and predicate calculus, which attempts to show that the statement's negation contradicts the general ideas. [12 hrs]</p> <p>Intelligent Search Methods and Strategies search is inherent to the problem and methods of Artificial Intelligence (AI). This is because AI problems are intrinsically complex. Efforts to solve problems with computers which humans can routinely innate cognitive abilities, pattern recognition, perception, and experience, invariably must turn to considerations of search. All search methods essentially fall into one of two categories, exhaustive (blind) methods, and heuristic or informed methods. [12 hrs]</p> <p>Introduction to Expert Systems: understand the expert systems and how they can build their software to solve the applications. [9 hrs]</p> <p>Revision problem classes [6 hrs]</p>

	<p><u>Part B - Practical direction</u></p> <p>An Introduction to Python with Beginning Python Basics and Python Program Flow. [8 hrs]</p> <p>Functions & Modules, Exceptions Handling, Exceptions Handling, and Classes in python. [8 hrs].</p> <p>Generators and iterators and Data Structures in Python. [12 hrs]</p> <p>Using Python in Automatic Theorem Proving, and in Intelligent Search Methods. [12 hrs]</p>

Delivery Plan (Weekly Syllabus)	
	Material Covered
Week 1, 2	Foundations of Artificial Integument (AI) : <ul style="list-style-type: none"> • An introductory survey of AI. • History, theory of AI. • Philosophy of Intelligent • AI properties • Targets of AI • Applications of AI • Characteristics of the languages of AI • AI problems • Intelligent measures • Why we are study AI
Week 3-5	Knowledge Representation: <ul style="list-style-type: none"> • Knowledge Base in AI • Knowledge representation schemes in AI • Logical representation • Procedural representation • Network representation • Structured representation
Week 6 7	Automatic Theorem Proving <ul style="list-style-type: none"> • What is the theorem proving • How can use theorem proving to prove the theorems.
Week 8-12	Intelligent Search Methods and Strategies in AI <ul style="list-style-type: none"> • State Space Search • General Problem Solving Approaches • Search Techniques • Blind Search • Heuristic Search • Solving of some real problems
Week 13-14	What are Expert Systems? <ul style="list-style-type: none"> • Characteristics of Expert Systems • Capabilities of Expert Systems • Components of Expert Systems • Knowledge Base • Inference Engine • Expert Systems Limitations • Applications of Expert System
Week 15	The preparatory week before the final exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	<p>An Introduction to Python with Beginning Python Basics</p> <ul style="list-style-type: none"> • What can Python do? • Why Python? • Good to know • Python Syntax compared to other programming languages • Python Install • The print statement • Comments • Python Data Structures & Data Types • String Operations in Python • Simple Input & Output • Simple Output Formatting • Operators in python
Week 2	<p>Python Program Flow</p> <ul style="list-style-type: none"> • Indentation • The If statement and its' related statement • An example with if and it's related statement • The while loop • The for loop • The range statement • Break &Continue • Assert • Examples for looping
Week 3,4	<p>Functions& Modules</p> <ul style="list-style-type: none"> • Create your own functions • Functions Parameters • Variable Arguments • Scope of a Function • Function Documentations • Lambda Functions& map • n Exercise with functions • Create a Module • Standard Modules
Week 5	<p>Exceptions Handling</p> <ul style="list-style-type: none"> • Errors • Exception handling with try • handling Multiple Exceptions • Writing your own Exception
Week 6,7	<p>Classes In Python</p> <ul style="list-style-type: none"> • New Style Classes • Creating Classes • Instance Methods • Inheritance • Polymorphism • Exception Classes & Custom Exceptions

Week 8,9	Generators and iterators and Data Structures <ul style="list-style-type: none"> • Iterators • Generators • The Functions any and all • With Statement • Data Compression • List Comprehensions • Nested List Comprehensions • Dictionary Comprehensions • Functions • Default Parameters • Variable Arguments • Specialized Sorts
Week 10,11	Using Python in Automatic Theorem Proving
Week 12,14	Using Python in Intelligent Search Methods

Module Aims, Learning Outcomes, and Indicative Contents	
Module Aims	This course provides a technical and operational overview of digital computer networks, the foundation for all modern information systems and services.
Module Learning Outcomes	The student will learn about the major software and hardware technologies used on home and enterprise computer networks and the global Internet. The student will understand how information is in digital packets and transported across local networks and other global networks interconnecting over the Internet backbone.
Indicative Contents	Indicative content includes the following. <u>Theoretical direction</u>

Introduction: Data communications, classification of computer networks, computer network topologies, communication protocols, and standards, layered tasks, the OSI model and layers, TCP/IP protocol suite, addressing. [6 hrs]

In Physical Layer: Data and signals, analog and digital, analog and digital signals, signals and communication, digital signals, transmission of digital signals, transmission impairments, data rate limits and transmission and performance, digital to digital conversion, , connecting devices: Hub, Switches, Repeaters, Bridges, Routers, Gateways and Routers. [9 hrs]

In Data Link Layer: Error detection and correction: introduction, CRC and checksum, framing, flow and error control. [6 hrs]

In Network Layer: Class full and classless addressing, internetworking, routing concepts, IP routing, routing table, routing components, routing algorithm types (Static V.S. Dynamic, Source routing V.S. Hop-by-hop, Centralize V.S. Distributed, and Distance vector V.S. Link state). [9 hrs]

In Transport Layer: Process to process delivery, Protocols: UDP, TCP and SCTP, congestion control, quality of service. [6 hrs]

In Application Layer Functionality and Protocols: How do the functions of the three upper OSI model layers provide network services to end-user applications?, How do the TCP/IP application layer protocols provide the services specified by the upper layers of the OSI model?, How do people use the application layer to communicate across the information network?, What are the functions of well-known TCP/IP applications, such as the World Wide Web and e-mail, and their related services (HTTP, DNS, DHCP, STMP/POP, and Telnet)?. [9 hrs]

Revision problem classes [6 hrs]

Part B - Practical direction

Fundamentals Study of different types of Network cables and practically implements the cross-wired cables and straight-through cables using a clamping tool. [8 hrs]

Study of network addressing and How to connect the computers to LAN. [8 hrs]

	Introduction to packet tracer program [8 hrs] Learn how basic switch and router configuration. Also, Learn router configuration in small network. [15 hrs]
--	---------------------------------------------------------------------------------------------------------------------------------------------------------------

Learning and Teaching Strategies	
Strategies	The primary strategy that will be adopted in delivering this course is to encourage student's participation in the exercises while simultaneously refining and expanding their skills in the networking field. This will be achieved through classes and scientific laboratories. In addition to exploring the capabilities and limitations of today's most popular networks, including Ethernet, Wi-Fi, and Cellular, it also covers topics closely related to networks.

	Material Covered
Week 1,2	Lab 1: Study of different types of Network cables and practically implement the cross-wired cables and straight-through cables using a clamping tool
Week 3,4	Lab 2: Study of network devices in detail.
Week 5,6	Lab 3: Study of network addressing
Week 7,8	Lab 4: Connect the computers to LAN.
Week 9,10	Lab 5: Introduction to packet tracer program.

Week 11,12	Lab 6: Basic switch & router configuration
Week 13,14	Lab 7: Router configuration in small network

Learning and Teaching Resources		
	Text	Available in the Library?
Required Texts	3. Behrouz Forouzan, "Introduction to Data Communication and Networking", Tata McGraw Hill, New Delhi. 4. Mark A. Dye, Rick McDonald, Antoon W. Ruff, "Network Fundamentals, CCNA Exploration Companion Guide", Copyright© 2008 Cisco Systems, Inc.	Yes
Recommended Texts	Nagpal D P, "Local Area Networks", Asian Books P Ltd, New Delhi	No

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	1- To understand and explain the main techniques and algorithms used in compilers. 2- To understand, design and implement a lexical analyzer. 3- To understand, design and implement a Syntax Analysis. 4- To understand, design and implement a parser. 5- To understand, design code generation schemes.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1- Learn about compilers and interpreters. 2- Explain the main techniques and algorithms used in compilers. 3- Describe an application of regular expressions in lexical scanners. 4- Discuss the hand coded scanner and automatically generated a scanner. 5- Explain the formal definition of tokens. 6- Describe finite state automata. 7- Explain the revision of formal definition of grammars. 8- Explain BNF and EBNF. 9- Describe the Bottom – up and top – down parsing. 10- Explain tabular, recursive, and descent parsers. 11- Learn about error handling. 12- Describe the automatic generation of tabular parsers, symbol table management, and the use of tools in support of the translation process.
Indicative Contents المحتويات الإرشادية	1- Introduction to Compilers: The role of language translation in the programming process; 2- Comparison of interpreters and compilers, language translation phases, machine dependent and machine independent aspects of translation, language translation as a software engineering activity 3- Lexical Analysis: Application of regular expressions in lexical scanners, hand coded scanner vs. automatically generated a scanner, formal definition of tokens 4- Implementation of finite state automata. 5- Syntax Analysis: Revision of formal definition of grammars, BNF and EBNF, Bottom – up, top – down parsing, ... 6- Parsers Implementation: automatic generation of tabular parsers, symbol table management, the use of tools in support of the translation process, 7- Project presentation1

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	Employing these strategies can create a comprehensive and engaging learning experience in compiler construction module, such as lectures, interactive discussions, hands-on lab sessions, case studies, assignments, projects, guest lectures, online resources, assessments, group projects, and continuous support.

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1+2	Introduction to Compilers: The role of language translation in the programming process;
Week 3+4	Comparison of interpreters and compilers, language translation phases, machine dependent and machine independent aspects of translation, language translation as a software engineering activity
Week 5	Lexical Analysis: Application of regular expressions in lexical scanners,
Week 6	Lexical Analysis: hand coded scanner vs. automatically generated a scanners
Week 7	Lexical Analysis: formal definition of tokens
Week 8	Implementation of finite state automata.
Week 9	Syntax Analysis: Revision of formal definition of grammars,
Week 10	Syntax Analysis: BNF and EBNF;
Week 11	Syntax Analysis: Bottom up vs. top down parsing,
Week 12	Syntax Analysis: tabular vs. recursive descent parsers,
Week 13	error handling,
Week 14	Parsers Implementation: automatic generation of tabular parsers, symbol table management, the use of tools in support of the translation process,
Week 15	Project presentation

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

	Material Covered
Week 1+2	Implementation of strings
Week 3+4+5	Implementation of regular expression and Finite state automata
Week 6+7+8	Implementation of a lexical analyzer
Week 9+10	Implementation of a symbol table
Week 11+12+13	Implementation of a basic parser (3 weeks)
Week 14+15	Design of a compiler for simple language (project)

Module Aims, Learning Outcomes, and Indicative Contents	
Module Aims	The course is a research-based course and therefore focuses on leading students to investigate the current state of research in Computational Intelligent areas as well as to gain comprehensive theoretical knowledge from scientific research about the basic concepts and features of CI methodologies and approaches.
Module Learning Outcomes	Provide the student with key vocabulary and help to understand artificial intelligence and Computational intelligence by understand: <ul style="list-style-type: none"> • Optimization <ul style="list-style-type: none"> ○ Constrained, unconstrained optimization ○ Parameter space, function space, and fitness space ○ Local and global optima ○ Multi-objective optimization

	<ul style="list-style-type: none"> • Classification / Learning <ul style="list-style-type: none"> ○ Classification (Supervised Learning) ○ Clustering (Unsupervised Learning) ○ Reinforcement Learning • Control Systems
<p>Indicative Contents</p>	<p>Indicative content includes the following.</p> <p><u>Theoretical direction</u></p> <p>Introduction to Computational Intelligent topics fundamental concepts. [6 hrs]</p> <p>Neural Networks (NNs): A neural network is a method in artificial intelligence that teaches computers to process data in a way that is inspired by the human brain. It is a type of machine learning process, called deep learning that uses interconnected nodes or neurons in a layered structure that resembles the human brain. [9 hrs]</p> <p>Fuzzy Logic (FL): Fuzzy logic is a form of many-valued logic in which the truth value of variables may be any actual number between 0 and 1. It is employed to handle the concept of partial truth, where the truth value may range between entirely true and false. By contrast, in Boolean logic, the truth values of variables may only be the integer values 0 or 1. [9 hrs]</p> <p>Genetic Algorithms (GAs): In computer science and operations research, a genetic algorithm (GA) is a meta-heuristic inspired by the process of natural selection that belongs to the larger class of evolutionary algorithms (EA). Genetic algorithms are commonly used to generate high-quality solutions to optimization and search problems by relying on biologically inspired operators such as mutation, crossover, and selection. Some examples of GA applications include optimizing decision trees for better performance, solving Sudoku puzzles, hyper-parameter optimization, causal inference, etc.. [9 hrs]</p> <p>Swarm Intelligence: Swarm intelligence (SI) is the collective behavior of decentralized, self-organized, natural, or artificial systems. The concept is employed in work on artificial intelligence. SI systems typically consist of a population of simple agents or boids interacting locally with one another and with their environment. The inspiration often comes from nature, especially biological systems. The agents follow straightforward rules, and although there is no centralized control structure dictating how individual agents should behave, local and to a certain degree, random interactions between such agents lead to the emergence of "intelligent" global</p>

	<p>behavior unknown to the individual agents. Examples of swarm intelligence in natural systems include ant colonies, bee colonies, bird flocking, hawks hunting, animal herding, bacterial growth, fish schooling, and microbial intelligence. [9 hrs]</p> <p>Revision problem classes [6 hrs]</p> <p><u>Part B - Practical direction by Python</u></p> <p>Introduction to Python for AI . [6 hrs]</p> <p>Applying python of some of NN applications. [9 hrs].</p> <p>Applying python of some of Fuzzy applications. [9 hrs]</p> <p>Applying python of some of GAs applications. [9 hrs]</p> <p>Applying python of some of Swarm Intelligent applications. [9 hrs]</p> <p>Applying python of some of Hybridization of CI Algorithms applications. [6 hrs]</p>

Week 1	Introduction to Computational Intelligent topics fundamental concepts.
Week 2, 4	Neural Networks (NNs) <ul style="list-style-type: none"> • Introduction to NN • Supervised, and unsupervised learning, • NN training algorithms, training rules, • Back propagation algorithm • Applications of NNs.
Week 5-7	Fuzzy Logic (FL) <ul style="list-style-type: none"> • Introduction to FL • Classical and fuzzy sets: Overview of classical sets • Membership function • Fuzzy rule generation. • Operations on Fuzzy Sets: Compliment, Intersections, Unions, Combinations of Operations • Fuzzy Arithmetic, Linguistic Variables, Arithmetic Operations. • Applications of FL.
Week 8 10	Genetic Algorithms (GAs) <ul style="list-style-type: none"> • Introduction to GAs • Genetic Operators and Parameters • GAs in problem solving • Theoretical foundations of genetic algorithms, implementation issues. • Applications of GAs
Week 11-13	Swarm Intelligence <ul style="list-style-type: none"> • Particle Swarm Optimization (PSO). • Overview of Ant Colony Algorithm, and Bee Colony Algorithm.
Week 14	Hybridization of CI Algorithms. <ul style="list-style-type: none"> • Applications of Hybrid CI algorithms
Week 15	The preparatory week before the final exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	Introduction to Python for AI
Week 2-4	Applying python of some of NN applications
Week 5-7	Applying python of some of Fuzzy applications
Week 8-10	Applying python of some of GAs applications
Week 11-13	Applying python of some of Swarm Intelligent applications
Week 14,15	Applying python of some of Hybridization of CI Algorithms applications

Co-requisites module	None	Semester	

Module Aims, Learning Outcomes, and Indicative Contents	
Module Aims	This course introduces the architecture, structure, functions, components, and models of the Internet and other computer networks. The principles and design of IP addressing and the fundamentals of Ethernet concepts, media, and operations are introduced to provide a foundation for the curriculum..
Module Learning Outcomes	At the end of the course, the students will be able to: <ul style="list-style-type: none"> • Understand and describe the devices and services used to support communications in data networks and the Internet • Understand and describe the role of protocol layers in data networks • Understand and describe the importance of addressing and naming schemes at various layers of data networks in IPv4 and IPv6 environments

	<ul style="list-style-type: none"> • Design, calculate, and apply subnet masks and addresses to fulfill given requirements in IPv4 and IPv6 networks • Explain fundamental Ethernet concepts, such as media, services, and operations • Build a simple Ethernet network using routers and switches • Use Cisco command-line interface (CLI) commands to perform basic router and switch configurations • Utilize standard network utilities to verify small network operations and analyze data traffic.
<p>Indicative Contents</p>	<p>Indicative content includes the following.</p> <p>Introduction to explain how multiple networks are used in everyday life. Describe the topologies and devices used in a small to medium-sized business network. Explain the essential characteristics of a network that supports communication in a small to medium-sized business. Explain networking trends that will affect network use in small to medium-sized companies. [8 hrs]</p> <p>Explain the features and functions of Cisco IOS Software. Configure initial settings on a network device using the Cisco IOS software. Given an IP addressing scheme, configure IP address parameters on end devices to provide end-to-end connectivity in a small to medium-sized business network. [9 hrs]</p> <p>Explain how rules facilitate communication. Explain the role of protocols and standards organizations in facilitating interoperability in network communications. Explain how devices on LAN access resources in a small to medium-sized business network.. [8 hrs]</p> <p>Explain how physical layer protocols and services support communications across data networks. Build a simple network using the appropriate media. Explain the role of the data link layer in supporting communications across data networks. Compare media access control techniques and logical topologies used in networks. [9 hrs]</p> <p>Explain the operation of Ethernet. Explain how a switch operates. Explain how the address resolution protocol enables communication on a network. [6 hrs]</p> <p>Explain the use of IPv4 addresses to provide connectivity in small to medium-sized business networks. Configure IPv6 addresses to provide connectivity in small to medium-sized business networks. Use standard testing utilities to verify and test network connectivity. [9 hrs]</p> <p>Implement an IPv4 addressing scheme to enable end-to-end connectivity in a small to medium-sized business network. Given a set of requirements, implement a VLSM</p>

	<p>addressing plan to connect end users in a small to medium-sized network. Explain design considerations for implementing IPv6 in a business network. [6 hrs]</p> <p>Explain how transport layer protocols and services support communications across data networks. Compare the operations of transport layer protocols in supporting end-to-end communication. [8 hrs]</p> <p>Explain the operation of the application layer in providing support to end-user applications. Explain how well-known TCP/IP application layer protocols operate. [8 hrs]</p> <p>Explain the features and functions of Cisco IOS Software. Configure initial settings on a network device using the Cisco IOS software. Given an IP addressing scheme, configure IP address parameters on end devices to provide end-to-end connectivity in a small to medium-sized business network. [8 hrs]</p>

Learning and Teaching Strategies

Strategies	<p>The primary strategy adopted in delivering this course is to encourage students' participation in the exercises while simultaneously refining and expanding their skills in the networking field. This will be achieved through classes and scientific laboratories. In addition to exploring the capabilities and limitations of today's most popular networks, including Ethernet, Wi-Fi, and cellular, it also covers topics closely related to networks.</p> <p>By the end of the course, students will be able to build simple LANs, perform basic configurations for routers and switches, and implement IP addressing schemes.</p>

	Assignments	2	10% (10)	2, 12	LO # 3, 4, 6 and 7
	Projects / Lab.	1	10% (10)	Continuous	
	Report	1	10% (10)	13	LO # 5, 8 and 10
Summative assessment	Midterm Exam	2 hr	10% (10)	7	LO # 1-7
	Final Exam	2hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

	Material Covered
Week 1, 2	Explore the Network
Week 3-4	Configure a Network Operating System
Week 5,7	Network Protocols and Communications, and Network Access
Week 8	Ethernet
Week 9-11	Network Layer, IP Addressing, and Subnetting IP Networks
Week 12	Transport Layer
Week 13	Application Layer
Week 14	Build a Small Network
Week 15	The preparatory week before the final exam

Delivery Plan (Weekly Lab. Syllabus)

	Material Covered
Week 1	Lab 1: Packet Tracer Program
Week 2	Lab 2: Switch & Router Configuration.
Week 3,4	Lab 3: Router Configuration Networks
Week 5,6	Lab 4: Address Resolution Protocol ARP and Reverse Address Resolution Protocol RARP
Week 7	Lab 5: Domain Name Service (DNS)
Week 8,9	Lab 6: Dynamic Host Control Protocol (DHCP)
Week 10	Lab 7: Virtual Local Area Network (VLAN)
Week 11,12	Lab 8: Configure a Network using Distance Vector Routing protocol.
Week 13,14	Lab 9: Configure a Network using Link State Routing protocol

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Aims</p> <p>أهداف المادة الدراسية</p>	<ol style="list-style-type: none"> 6. Ability to demonstrate knowledge of interface design principles and be able to apply them in a visual programming environment. 7. The student should have knowledge of Object Oriented Concepts and how to implement them in a visual programming environment.
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>A- Cognitive goals</p> <ol style="list-style-type: none"> 8. Transforming the vision and path of traditional programming concepts towards visual programming 9. Expanding the student's knowledge from the idea of scattered small programs to an integrated application 10. Expanding the student's knowledge of Object Oriented 11. Expanding the student's knowledge towards programming the use of sound, images and video for presentation requirements <p>B - The soft skills objectives of the course.</p> <ol style="list-style-type: none"> 1. Developing the student's skills in searching for ideas to present as proposals for discussion to implement simplified projects 2. Developing the student's programming skills through implementing some of the ideas presented and discussed, such as: 3. Programming some games or educational programs in a smooth and useful review manner.
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<p>Indicative content includes the following.</p> <p>VB.Net is considered an event-driven language that is easy to learn and write code. It is designed to foster rapid application development (RAD), where the application prototype can be developed first with less focus on writing complex codes in the initial stages of the development cycle.</p> <p>In a course, you will build on existing knowledge of the design process to carry out a project, which will integrate elements of user interface, user experience and service design.</p> <p>In a course, introduced you to the basics of designing applications with Visual Studio 2012 and the components of the Visual Basic language. You know how to design graphical user interfaces (GUIs) and how to use Visual Basic statements to program events for the various controls. You also know how to write functions and subroutines and how to call the functions and subroutines that are built into Visual Basic.</p>

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	<p>Readings, self-learning, panel discussions.</p> <ul style="list-style-type: none"> - Classroom exercises and activities. - Guiding students to some websites to benefit from them to develop abilities. - Holding research seminars through which some problems are explained and analyzed and the mechanism for finding solutions. <p>Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students</p>

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	

<p>Module Objectives</p> <p>أهداف المادة الدراسية</p>	<ol style="list-style-type: none"> 1. Understanding PHP Basics: Learn the fundamentals of PHP programming language, including syntax, variables, data types, operators, control structures, and functions. 2. Web Development Concepts: Gain an understanding of web development concepts such as client-server architecture, HTTP protocol, request/response cycle, and the role of PHP in web development. 3. Working with HTML and CSS: Learn how to integrate PHP code within HTML and CSS to create dynamic web pages. Understand how to generate HTML content using PHP and manipulate CSS styles based on dynamic conditions. 4. Handling Form Data: Explore techniques for handling form submissions using PHP. Learn how to retrieve form data, validate and sanitize input, and perform server-side form processing. 5. Working with Databases: Understand the basics of database management systems and how to interact with databases using PHP. Learn how to establish database connections, execute SQL queries, and handle result sets. 6. Session and Cookies Management: Explore techniques for managing user sessions and cookies using PHP. Learn how to create, store, and retrieve session data, as well as how to implement user authentication and authorization. 7. File Handling: Gain knowledge on file handling operations in PHP, such as reading from and writing to files, uploading files, and manipulating file metadata. 8. Working with APIs: Understand the concepts of Application Programming Interfaces (APIs) and learn how to interact with external APIs using PHP. Explore techniques for consuming and integrating data from popular APIs.
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>When completing a web programming module focused on PHP, the student can gain the following learning outcomes:</p> <ol style="list-style-type: none"> 1. Basic PHP Knowledge: Demonstrate a solid understanding of PHP syntax, variables, data types, operators, control structures, and functions. 2. Dynamic Web Page Creation: Develop the ability to integrate PHP code with HTML and CSS to create dynamic web pages that can generate and manipulate content based on user input or database interactions. 3. Form Handling: Successfully handle form submissions using PHP by retrieving form data, validating and sanitizing input, and performing server-side form processing. 4. Database Interaction: Exhibit competence in establishing connections with databases, executing SQL queries, handling result sets, and implementing basic database operations such as inserting, updating, and deleting data. 5. Session and Cookies Management: Implement session and cookies management techniques in PHP to maintain user sessions, store user data, and implement basic user authentication and authorization functionalities.

	<p>6. File Handling: Acquire skills in reading from and writing to files, uploading files, and manipulating file metadata using PHP.</p> <p>7. API Integration: Demonstrate the ability to consume data from external APIs, understand API documentation, and effectively integrate API functionality into PHP-based web applications.</p>
<p>Indicative Contents المحتويات الإرشادية</p>	<ul style="list-style-type: none"> • Introduction to PHP: <ul style="list-style-type: none"> a. PHP syntax and basic language constructs b. أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Aims أهداف المادة الدراسية</p>	<p>THIS COURSE WILL PROVIDE A BASIC UNDERSTANDING OF THE METHODS AND TECHNIQUES OF DEVELOPING A SIMPLE TO MODERATELY COMPLEX WEB SITE. USING THE CURRENT STANDARD WEB PAGE LANGUAGE, STUDENTS WILL BE INSTRUCTED ON CREATING AND MAINTAINING A SIMPLE WEB SITE. AFTER THE FOUNDATION LANGUAGE HAS BEEN ESTABLISHED, THE AID OF AN WEB EDITOR WILL BE INTRODUCED. THIS COURSE WILL PROVIDE A RIGOROUS TREATMENT OF OBJECT - ORIENTED CONCEPTS (DESIGN AND IMPLEMENTATION OF OBJECTS, CLASS CONSTRUCTION AND DESTRUCTION, ENCAPSULATION, INHERITANCE, AND POLYMORPHISM) USING JAVA AS AN EXAMPLE LANGUAGE.</p>
<p>Module Learning Outcomes مخرجات التعلم للمادة الدراسية</p>	<p>DEVELOPMENT OF SOUND PROGRAMMING AND DESIGN SKILLS, PROBLEM SOLVING AND MODELING OF REAL-WORLD PROBLEMS FROM SCIENCE, ENGINEERING, AND ECONOMICS USING THE OBJECT-ORIENTED PARADIGM.</p>
<p>Indicative Contents المحتويات الإرشادية</p>	<p>Indicative content includes the following.</p> <ol style="list-style-type: none"> <u>1 Programming style</u> <u>2 Basic statements with looping and repetitions</u> <u>3 One dimensional Arrays</u> <u>4 Two dimensional Arrays</u> <u>5 Classes and methods</u> <u>6 Constructors, Variable types, Overloading</u> <u>7 UML diagrams</u> <u>8 Programming by contract: preconditions, postconditions and invariants</u> <u>9 Designing interfaces</u> <u>10 Polymorphism</u> <u>11 Encapsulation</u> <u>12 Inheritance</u>

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

<p>Strategies</p>	<p>Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes,</p>
--------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Introduction - Types of Data types, type of data structures
Week 2	Arrays DS: definition, features, logic, physical structure, access equations of one dimensional array.
Week 3	Arrays DS: logic, physical structure, access equations of two dimensional arrays.

Week 4	Arrays DS: logic, physical structure, access equation of three and multi-dimensional arrays and triangle arrays.
Week 5	Strings DS: definition, basic representations in memory, create String object
Week 6	Linked Lists DS: definition, advantage and disadvantage of arrays and linked lists, basic operations of linked lists, types of linked lists.
Week 7	Exam
Week 8	Implementation of linked lists
Week 9	Stack DS: definition, features, implementation using linked lists and Arrays
Week 10	Stack DS: Application-recursion
Week 11	Stack DS: Application- Expression Conversion
Week 12	Stack DS: Application- evaluating expressions
Week 13	Queue DS: definition, features, implementation using linked lists
Week 14	Queue DS: definition, features, implementation using Arrays
Week 15	Queue DS: types of queues
Week 16	Preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

	Material Covered
Week 1	Lab 1: Arrays classes in java package
Week 2	Lab 2: tasks in Arrays
Week 3	Lab 3: Strings methods in java package
Week 4	Lab 4: tasks in Strings
Week 5	Lab 4: tasks in Strings (1st Quiz)
Week 6	Lab 5: Linked Lists class in java package

Week 7	Lab 6: tasks in linked lists (single and circular linked lists)
Week 8	Lab7: tasks in linked lists (double and Circular Double Linked Lists)
Week 9	Lab 8: Stack class in java package
Week 10	Lab 9: Stack to evaluate expression
Week 11	Lab 10: Stack class in java package
Week 12	Lab 10: Stack class in java package (2 nd Quiz)
Week 13	Lab 11: implement queue using arrays
Week 14	Lab 12: implement queue using linked lists

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	The objective of this course is to provide students with the concepts, process, and tools of systems analysis and systems design, learn new technique and approaches to develop systems more effectively and efficiently. The students learn that all information systems projects move through the four phases of planning, analysis, design, and implementations; all projects require analyst to gathering requirements, model the business needs, and create blueprints for how the systems should be built, and all projects require an understanding of organizational behavior concepts like change management and team building.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<ol style="list-style-type: none"> 1. Understand the fundamental concepts and terms of system analysis and system design 2. Describe SDLC model and explain all phases in systems development. 3. Discuss various approaches of systems analysis and design also explain their strengths and weaknesses. 4. Understand how to plan for the project by using scheduling techniques (Break down structure) 5. Understand and explain how to use Gantt and Pert Chart 6. Explain information gathering techniques (interview, questionnaire) 7. Understand how to estimate time, effort and the number of staff 8. Identify the capabilities and experiences that must be available in the work team 9. Developing the student's vision of the reality of the traditional systems used and looking at them in a scientific and systematic way, and this is reflected even on non-computer systems or projects in terms of the feasibility study and the possibility of developing them and achieving the required profitability 10. Achieving steps towards the future to provide a systems analyst
Indicative Contents المحتويات الإرشادية	<p>Indicative content includes the following.</p> <p><u>Part A – Introduction to System Analysis & Design</u></p> <p>The system analyst, The system development life cycle (SDLC), Building an information system steps, SDLC fundamental phases.</p> <p>Planning, Goal, Steps, Deliverable, Analysis, Goal, Steps, Deliverable. Design, Goal, Steps, Deliverable, Implementation, Goal, Steps, Deliverable, Systems development methodologies, Systems analysis and design methodology (SADM), Methodologies source, Categorize methodologies, Process-centered, Data-centered, Object oriented. Structured Design(SSADM),</p>

	<p>Waterfall development technique, Advantages, Disadvantages, Parallel development technique, Advantages, Disadvantages. Rapid Application Development (RAD), Phased development technique, Advantages, Disadvantages. Prototyping technique, Advantages, Disadvantages, Throwaway prototyping technique, Advantages, Disadvantages. Agile Development, Extreme programming technique, Advantages, Disadvantages, Selecting appropriate development methodology, Project Team Roles and Skills, Business Analyst, Roles, Skills, Interests, Phases, Systems Analyst, Roles, Skills, Interests, Phases, Infrastructure Analyst, Roles, Skills, Interests, Phases, Change Management Analyst, Roles, Skills, Interests, Phases, Project Manager, Roles, Skills, Interests, Phases</p>	[20 hrs]
	<p>Weekly Tutorial General Discussion, Assignments 1 Evaluation Evaluation</p>	[8 hrs]
	<p><u>Part B – The Relational Algebra</u> Project Management, Identifying Project Size, Estimate System Size, Function point approach, Total Unadjusted Function Points (TUF), Adjusted Project Complexity (APC), Total Adjusted Function Points (TAFP), Complexity Estimate Required Effort, Estimate Time Required, Estimate the Number of Staff, Exercises Creating and Managing the Work plan, Identifying Tasks, Work Breakdown Structure (WBS), Constructing a WBS, Reasons for creating a WBS Diagram, Gantt Chart, Pert Chart Critical path method (CPM), Staffing the project</p>	[10 hrs]
	<p>Weekly Tutorial General Discussion, Assignments 1 Evaluation Evaluation</p>	[7 hrs]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	<p>The module is delivered through a series of lectures. The lecture sessions discuss and explain to students the theoretical underpinnings of how software systems are analyzed and designed.</p> <p>Assessment is divided into four elements. First there are at least two quizzes that assess the student's competency in specific topics, also students will be ready for about five assignments evaluation, there is also a midterm class test, finally, there is an end of semester exam that tests the understanding of students for the theoretical material.</p>

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Aims</p> <p>أهداف المادة الدراسية</p>	<p>Here are some module aims typically associated with a Computer Organization & Architecture course. These aims describe the overarching goals and objectives of the course:</p> <ol style="list-style-type: none">1. To provide students with a solid understanding of the fundamental concepts and principles of computer organization and architecture.2. To introduce students to the components and operation of a computer system, including the CPU, memory, and I/O subsystems.3. To familiarize students with the Von Neumann architecture and its role in modern computer systems.4. To develop students' understanding of digital logic and Boolean algebra, enabling them to design and analyze combinational and sequential logic circuits.5. To introduce students to different number systems and their representations in digital systems.6. To explore the principles of data representation and arithmetic, including signed number representations and arithmetic operations.7. To introduce students to the concepts and techniques of instruction-level parallelism and pipelining.8. To enable students to analyze and resolve hazards and dependencies in pipelined architectures.9. To provide students with a comprehensive understanding of memory systems, including cache memory organization and virtual memory concepts.10. To introduce students to I/O systems, interfaces, and programming techniques.11. To familiarize students with microprocessor architecture and programming, including instruction set architecture (ISA) and assembly language programming.12. To develop students' ability to evaluate and optimize the performance of computer systems.13. To introduce students to parallel processing and multicore architectures, including the principles of cache coherence and synchronization.14. To explore emerging trends and technologies in computer organization and architecture, such as quantum computing and cloud computing. <p>This module aims to provide a broad overview of the goals and objectives of a Computer Organization & Architecture course.</p>
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>Here are some module learning outcomes that are typically associated with a Computer Organization & Architecture course. These outcomes represent the knowledge, skills, and competencies that students are expected to achieve upon completing the course:</p> <ol style="list-style-type: none">1. Understand the fundamental components and principles of computer organization and architecture.2. Demonstrate knowledge of the Von Neumann architecture and its components.3. Explain the instruction execution cycle and the role of the CPU.4. Analyze and design combinational and sequential logic circuits.5. Demonstrate an understanding of number systems and their representations in digital systems.

	<ol style="list-style-type: none"> 6. Explain the principles of data representation and arithmetic operations. 7. Understand the concepts and techniques of instruction-level parallelism and pipelining. 8. Analyze and resolve hazards and dependencies in pipelined architectures. 9. Describe the organization and hierarchy of memory systems, including cache memory. 10. Understand virtual memory concepts and address translation mechanisms. 11. Explain I/O systems, interfaces, and programming techniques. 12. Understand the principles of microprocessor architecture and programming. 13. Analyze and evaluate the performance of computer systems. 14. Understand the principles and techniques of parallel processing and multicore architectures. 15. Identify and discuss emerging trends and technologies in computer organization and architecture. <p>These module learning outcomes reflect the core knowledge and skills that students are expected to gain throughout the course.</p> <p>2.</p>
<p>Indicative Contents المحتويات الإرشادية</p>	<p>Here are some indicative contents for a Computer Organization & Architecture course targeted at beginners. These contents cover the fundamental concepts and topics typically included in such a course:</p> <ol style="list-style-type: none"> 1. Introduction to Computer Systems <ul style="list-style-type: none"> • Overview of computer organization and architecture • Basic components of a computer system • Von Neumann architecture and its principles 2. Number Systems and Digital Logic <ul style="list-style-type: none"> • Binary, decimal, and hexadecimal number systems • Boolean algebra and logic gates • Combinational and sequential logic circuits 3. Data Representation <ul style="list-style-type: none"> • Binary representation of integers and characters • Signed number representation (sign-magnitude, one's complement, two's complement) • Floating-point representation 4. Central Processing Unit (CPU) <ul style="list-style-type: none"> • CPU components and organization • Instruction execution cycle • CPU performance and factors affecting it. 5. Memory Systems <ul style="list-style-type: none"> • Memory hierarchy and its importance • Primary memory (RAM, ROM) and secondary storage (hard drives, solid-state drives) • Caches and cache organization 6. Instruction Set Architecture (ISA) <ul style="list-style-type: none"> • Overview of instruction sets and their formats. • Addressing modes and instruction types • Instruction decoding and execution. 7. Input/Output Systems <ul style="list-style-type: none"> • I/O devices and interfaces • I/O communication methods (programmed I/O, interrupt driven. I/O, DMA) • I/O performance and bottlenecks

	<ol style="list-style-type: none"> 8. Processor Design and Organization <ul style="list-style-type: none"> • Basic CPU design principles (fetch-decode-execute cycle) • Instruction pipelining and hazards. • Control unit and microprogramming 9. Computer Arithmetic <ul style="list-style-type: none"> • Binary arithmetic operations (addition, subtraction, multiplication, division) • Fixed-point and floating-point arithmetic • Arithmetic logic unit (ALU) design 10. Introduction to Assembly Language Programming <ul style="list-style-type: none"> • Basics of assembly language programming • Instruction syntax and addressing modes. • Simple assembly programs and debugging 11. Introduction to Parallel Processing <ul style="list-style-type: none"> • Concepts of parallel processing and its importance • Flynn's taxonomy (SISD, SIMD, MISD, MIMD) • Multicore processors and their organization 12. Emerging Trends in Computer Architecture <ul style="list-style-type: none"> • Introduction to emerging technologies (quantum computing, neuromorphic computing) • Cloud computing and virtualization • Energy-efficient computing and green computing concepts <p>These indicative contents provide beginners with a solid foundation in computer organization and architecture.</p>

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	<p>When teaching a Computer Organization & Architecture course to beginners, it's important to adopt strategies that cater to their foundational understanding and gradually build their knowledge and skills. Here are some effective learning and teaching strategies for beginners in a Computer Organization & Architecture course:</p> <ol style="list-style-type: none"> 1. Visual Aids and Analogies: Use visual aids such as diagrams, charts, and illustrations to simplify complex concepts. Analogies comparing computer components to familiar real-world objects can make abstract ideas more relatable and easier to understand. 2. Step-by-Step Approach: Break down complex topics into smaller, manageable steps. Present the material in a sequential manner, building upon previously covered concepts. This helps beginners grasp the fundamentals before moving on to more advanced topics. 3. Direct Activities: Provide firsthand activities that allow beginners to interact with hardware components or simulation software. This can include assembling simple computer systems, performing basic circuit simulations, or writing simple programs. Direct activities reinforce learning and make abstract concepts more tangible. 4. Practical Examples: Use practical examples and real-life scenarios to demonstrate the relevance and application of the concepts being taught. Relate the material to everyday situations or commonly used technologies to help beginners connect theory to practice.

5. Scaffolding: Provide scaffolding support by gradually reducing assistance as students gain confidence and proficiency. Start with guided exercises and gradually increase the level of complexity and autonomy. This helps beginners develop their critical thinking skills and independent thinking.
6. Interactive Discussions: Encourage interactive discussions to promote active engagement and peer learning. Beginners can ask questions, share their perspectives, and learn from their classmates' experiences. This fosters a supportive learning environment where beginners can build their understanding collaboratively.
7. Concept Mapping and Summarizing: Encourage beginners to create concept maps or summaries of the material covered. Concept maps visually organize the relationships between different concepts, while summaries help reinforce understanding and retention.
8. Concrete Examples: Use concrete examples and familiar scenarios to explain abstract concepts. Relate computer organization and architecture to everyday experiences, such as explaining how a CPU functions like the brain of a computer or how cache memory is like a high-speed storage closet.
9. Incremental Assessments: Break assessments into smaller, incremental tasks to evaluate and reinforce learning along the way. This can include quizzes, short assignments, or mini projects that gradually increase in complexity as beginners progress through the course.
10. Encourage Questions: Create a supportive environment that encourages beginners to ask questions without hesitation. Answer questions patiently and provide explanations in a clear and accessible manner. This helps beginners clarify their doubts and deepen their understanding.
11. Provide Additional Resources: Offer supplementary resources, such as textbooks, online tutorials, and reference materials, to support beginners' learning outside the classroom. These resources can provide alternative explanations, additional examples, and further practice opportunities.
12. Regular Feedback and Guidance: Provide timely and constructive feedback on assignments and assessments to guide beginners' progress. Highlight their strengths and provide specific suggestions for improvement to help them grow and build confidence.

By employing these strategies, you can create an inclusive and supportive learning environment for beginners in a Computer Organization & Architecture course. Adjust the pace and depth of the course to accommodate their learning needs and gradually build their knowledge and skills in the subject.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	<ol style="list-style-type: none">1. It gives the student a broader idea of the possibility of things happening .2. The probability of things gives more opportunity for imagination.3. The moment- generating function gives him more opportunity to deal with the derivative of the moment- generating function.4. The student will be qualified in the next stage to deal with probability and statistics, especially in the subject of simulation .
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<ol style="list-style-type: none">3. Understand the vocabulary of probability and statistics .4. Understanding the nature of statistics as an integrated system of knowledge.5. Developing student's statistical concepts.6. An attempt to reach the concepts of probability and statistics .7. The ability to solve complex statistical problems.
Indicative Contents المحتويات الإرشادية	<p>Indicative content includes the following.</p> <p><u>Part A – permutations and combinations</u> <u>Permutations mean dealing with ordered things, but harmonics, the order is unimportant.</u></p> <p><u>Part B- Probability</u> <u>Probability is a measure of the possibility of an event occurring. Probability is measured as a number between zero and one, where zero indicates impossibility and one indicates certainty. The higher the probability of an event, the greater the possibility of that event occurring.</u></p> <p><u>Part C- Distributions</u> <u>Connected and discreet distributions and how to deal with them.</u></p>

Learning and Teaching Strategies

Weeks 5-6	Graphs: Data Structures for Graphs, Graph Traversals, Shortest Paths
Week 7	Hash Tables
Week 8	Maps, Sets, Multisets, and Multimaps
Week 9	Exam I

Weeks 10-11	Heaps: The Heap Data Structure, Implementing a Priority Queue, with a Heap, Analysis of a Heap-Based Priority Queue, Bottom-Up Heap Construction
Weeks 12-13	Text Processing: String Matching algorithms
Weeks 14-15	Algorithm Analysis: Time Complexity, Space Complexity
Week 16	Preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

	Material Covered
Week 1	Lab 1: Sorting
Week 2	Lab 2: Searching
Week 3	Lab 3: Trees
Week 4	Lab 4: Trees
Week 5	Lab 5: Graphs
Week 6	Lab 6: Graphs
Week 7	Lab 7: Hash Tables
Week 8	Lab 8: Maps
Week 9	Lab 9: Sets
Week 10	Lab 10: Heaps
Week 11	Lab 11: Heaps
Week 12	Lab 12: Text Processing
Week 13	Lab 13: Text Processing
Week 14	Lab 14: Algorithm Analysis
Week 15	Lab 15: Algorithm Analysis

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Aims</p> <p>أهداف المادة الدراسية</p>	<p>The aim of this course is to introduce students to the fundamental area of computer science which enables students to focus on the study of abstract models of computation.</p> <p>These abstract models allow the students to assess via formal reasoning what could be achieved through computing when they are using it to solve problems in science and engineering.</p> <p>The goal is to allow them to answer fundamental questions about problems, such as whether they can or not be computed.</p> <p>The course introduces basic computation models and their properties. The students will be able to express computer science problems as mathematical statements and to formulate proofs.</p>
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p style="text-align: center;">A- Knowledge and understanding :</p> <ul style="list-style-type: none"> - Clarifying the basic concepts in computational theory through a set of tools. -Gaining skills in problem-solving. -Acquisition of basic skills as an introduction to building languages. -Acquisition of theoretical concepts to deal with RE's, DFA's, NFA's, Stack's, Turing machines, and Grammars. <p style="text-align: center;">B- Subject-specific skills :</p> <p>B1 - The ability to design (FAs, NFAs, Grammar, languages modelling, small compilers basics).</p> <p>B2 - The ability to think about solving the problem according to specific rules.</p> <p>B3 - Writing scientific reports</p> <p>B4 - Know the comparison between (Natural and Formal Languages).</p>
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<ul style="list-style-type: none"> - In theoretical computer science, the theory of computation is the branch that deals with whether and how efficiently problems can be solved on a model of computation, using an algorithm. The field is divided into three major branches: automata theory, computability theory and computational complexity theory . - The main purpose of the theory of computation is to develop a formal mathematical model of computation that reflects the real world. computers. - The student can read about these basic topics in order to guide him in the subject of computational theory. These topics are: (Theory of computation, Language Concepts, Grammar Concepts, Finite State Machine, Deterministic finite automaton, Non-

	deterministic Finite State Machine, Regular Languages, Regular Expression, pumping Lemma, Context Free Grammar, FSM Summary, Context-Free Languages, Ambiguity).
--	------------------------------------------------------------------------------------------------------------------------------------------------------------------

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	<ul style="list-style-type: none"> - Readings, self-learning, panel discussions. - Classroom exercises and activities. - Guiding students to some websites to benefit from them to develop abilities. - Holding research seminars through which some problems are explained and analyzed and the mechanism for finding solutions. <p>Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p>

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p style="text-align: center;">Module Aims</p> <p style="text-align: center;">أهداف المادة الدراسية</p>	<p>The objective of this course is to introduce students to database management systems. It helps the student to present an actual practical project on realistic interaction and acquisition of skills by collecting information and dealing with a real institution through open discussion with the professor and his fellow students. Topics include</p> <ol style="list-style-type: none"> 1. Data, Information, and File system 2. Database and database users 3. Database system concepts and architecture 4. Data modeling using the Entity Relationship Diagram (ERD) 5. The relational data model and relational data constraints 6. Functional dependencies and normalization for relational databases 7. The Relational Algebra, 8. Relational database design for ER to relational mapping 9. Organization records in the file 9. Disk storage, basic file structure and hashing, 10. SQL schema definition, constraints, queries and views. 11. Acquisition of skills by using some functions of MSAccess.
<p style="text-align: center;">Module Learning Outcomes</p> <p style="text-align: center;">مخرجات التعلم للمادة الدراسية</p>	<ol style="list-style-type: none"> 11. Understanding the concept of relational databases. 12. Describe database concepts and architecture including query processing and optimization. 13. Design logical and mathematical models to organize data within a database. 14. Learn about the capabilities of Microsoft Access in designing Database. 15. Preparing the student to design a database of medium complexity using Access tools. 16. The student gains self-confidence as a result of acquiring knowledge of how to deal with data and organize them into tables that facilitate the process of storage and retrieval. 17. Develop skills to work in a group project to produce quality deliverables. 18. At the end of the chapter, the student achieves theoretical knowledge and practical capabilities in building an integrated database system
<p style="text-align: center;">Indicative Contents</p> <p style="text-align: center;">المحتويات الإرشادية</p>	<p>Indicative content includes the following.</p> <p><u>Part A – Introduction to Database</u></p> <p>Data, Information, Data Base (DB), Relational Data Base (RDB), Data Base Management System (DBMS). Characteristics of Database, Advantages and Disadvantages, Main phases of database design, Constructing an ER model, ER Diagram Symbols and Notations, Cardinality and Ordinality, How to Draw ER Diagrams, ER Diagram Best Practices. [14 hrs]</p> <p>Getting to know the Access interface, Create Database, Create & Design tables, Create table relationships, Make a dropdown list, Create & Design Query, Change the name of a field within the query, Add a calculated field to the query table, & Evaluation. [8 hrs]</p> <p><u>Part B – The Relational Algebra</u></p>

	<p>THE RELATIONAL ALGEBRA, Unary relational operations: SELECT and PROJECT, Sequences of Operations and the RENAME Operation, Operations from set theory, The Cartesian product Operation, Binary Relational Operations. [8 hrs]</p> <p>Using Datepart function, Using DateDiff function to find the difference between two dates, Create compound conditions, Using Logical operators, comparative and Like operators, & Evaluation.[8 hrs]</p> <p>Part C – Files and Records</p> <p>Files and Records, Organizing records in the file, Organizing Files on Disk, File Headers, Hashing Techniques, & Hashing Function. [8 hrs]</p> <p>Using IIF function, Using Switch function, & Evaluation.[6 hrs]</p>

Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

المنهاج الأسبوعي النظري

	Material Covered
Week 1	Introduction to Database Data, Information, Data Base (DB), Relational Data Base (RDB), Data Base Management System (DBMS)
Week 2	Characteristics of Database , Advantages and Disadvantages
Week 3	Main phases of database design Phase1, Phase2, ER Diagram, Main components of ER Diagram, Entities, Entity Attributes, Domain
Week 4	Main phases of database design Primary Key, Foreign Keys, Types of Relation Ships, Phase3, Phase4
Week 5	Constructing an ER model Attributes Types, Single, Multivalued, Compound, Derived, Stored, Key & Optional Attribute.
Week 6	ER Diagram Symbols and Notations Entity, Weak Entity, Attribute, Multivalued Attribute, Derived Attribute, Key Attribute, Relationship. Cardinality and Ordinality
Week 7	How to Draw ER Diagrams, ER Diagram Best Practices, Exercises.
Week 8	THE RELATIONAL ALGEBRA Unary Relational Operations: SELECT and PROJECT, Sequences of Operations and the RENAME Operation
Week 9	THE RELATION AL ALGEBRA Relational Algebra Operations from Set Theory: A. UNION, INTERSECTION, and MINUS B. The CARTESIAN PRODUCT (CROSS PRODUCT) Operation
Week 10	THE RELATIONAL ALGEBRA Binary Relational Operations: JOIN and DIVISION 1. The Join Operation A. Inner join, Variations of JOIN (The EQUIJOIN and NATURAL JOIN)
Week 11	THE RELATIONAL ALGEBRA B. Outer join: Left Outer Join, Right Outer Join Precedence of relational Operations 2. The Division Operation
Week 12	Files and Records Records and Record Types, Fixed Length Records, Formatting records of a file of Fixed length records, Variable Length Records, Formatting records of a file of variable-length records (Other options), Formatted a file of records with optional fields, Formatting A repeating field, Formatting file that includes records of different types
Week 13	Organizing records in the file Record Blocking and Spanned vs Un spanned Records Organizing Files on Disk Allocating File Blocks on Disk: Contiguous allocation, Linked allocation, Indexed allocation
Week 14	File Headers , Files of Unordered Records (Heap Files),Files of Ordered Records (Sorted Files)
Week 15	Hashing Techniques: Hash table, The idea behind hashing Hashing Function: Direct, Subtraction, & Modulo Division Hashing
Week 16	Preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

	Material Covered
Week 1	Lab 1: Introduction to MS-Access, Getting to know the Access interface, Create Database,
Week 2	Lab 2: Create & Design tables, Create tables relationships
Week 3	Lab 3: Evaluation
Week 4	Lab 4: Make a dropdown list, Create & Design Query
Week 5	Lab 5: Using zoom window and write some codes, Change the name of a field within a query
Week 6	Lab 6: Add a calculated field to the query table
Week 7	Lab 7: Evaluation
Week 8	Lab 8: Using Datepart function
Week 9	Lab 9: Using DateDiff function to find the difference between two dates
Week 10	Lab 10: Create compound conditions, Using Logical operators, comparative and Like operators
Week 11	Lab 11: Evaluation
Week 12	Lab 12: Using IIF function
Week 13	Lab 13: Evaluation
Week 14	Lab 14: Using Switch function
Week 15	Lab 15: Evaluation

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	

<p>Module Objectives</p> <p>أهداف المادة الدراسية</p>	<ol style="list-style-type: none"> 1. Understand the concept of static web design and its advantages and limitations. 2. Gain proficiency in HTML (Hypertext Markup Language) and CSS (Cascading Style Sheets) as the primary technologies for creating static web pages. 3. Learn the fundamental structure of HTML, including tags, elements, attributes, and their usage in creating web content. 4. Develop skills in creating and formatting different types of content, such as text, images, links, lists, tables, and forms using HTML. 5. Explore the principles of CSS and learn how to apply styles to HTML elements, including fonts, colors, backgrounds, margins, and padding. 6. Understand the box model in CSS and its significance in controlling the layout and positioning of elements on a web page. 7. Learn techniques for creating responsive web designs that adapt to different screen sizes and devices.
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>When completing a web programming module focused on PHP, the student can gain the following learning outcomes:</p> <ol style="list-style-type: none"> 1. Demonstrate a solid understanding of the concept of static web design and its purpose in creating websites. 2. Create well-structured and semantically correct HTML markup for static web pages. 3. Apply CSS styles effectively to enhance the visual presentation and layout of web content. 4. Construct responsive web designs that adapt gracefully to different screen sizes and devices. 5. Implement navigation menus, headers, footers, and other common components of static websites. 6. Optimize web graphics and images for faster loading times without sacrificing quality. 7. Incorporate accessibility considerations into web design to ensure inclusivity and compliance with accessibility standards. 8. Test and debug static web pages to ensure proper functionality across different browsers and devices. 9. Organize and manage website files and directories efficiently for ease of maintenance and scalability. 10. Demonstrate knowledge of best practices in static web design, including code documentation, version control, and collaboration techniques. 11. These learning outcomes reflect the skills and knowledge you should acquire upon completing the module on static web design. Mastery of these outcomes will enable you to design and build visually appealing, functional, and accessible static websites using HTML and CSS.
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<ol style="list-style-type: none"> 1. Introduction to Static Web Design: <ul style="list-style-type: none"> • Overview of static web design and its role in website development. • Understanding the differences between static and dynamic websites. • Exploring the benefits and limitations of static web design. 2. HTML Fundamentals: <ul style="list-style-type: none"> • Introduction to HTML markup and its structure.

- Understanding HTML tags, elements, and attributes.
- Creating and formatting text, headings, paragraphs, and lists.
- Working with links, images, and multimedia content.
- Creating tables for data representation.

3. CSS Basics:

- Introduction to CSS and its role in styling web pages.
- Understanding CSS syntax, selectors, and properties.
- Applying colors, backgrounds, and borders to elements.
- Controlling typography and font styles.
- Managing spacing and layout using margins, padding, and the box model.

4. Layout and Responsive Design:

- Creating multi-column layouts using CSS.
- Understanding the concept of responsive web design.
- Using media queries to adapt layouts for different screen sizes.
- Implementing flexible grids and fluid images.
- Applying responsive techniques to navigation menus and other elements.

5. Web Graphics and Optimization:

- Optimizing images for web display, including compression techniques.
- Working with icon fonts and scalable vector graphics (SVG).
- Understanding the impact of file formats and sizes on page load times.
- Implementing techniques to improve web performance, such as caching and minification.

6. Accessibility and Best Practices:

- Understanding the importance of web accessibility.
- Implementing accessibility features, such as alternative text for images and proper semantic markup.
- Following best practices for clean and maintainable code.
- Introduction to version control systems and collaboration tools.

7. Testing, Debugging, and Deployment:

- Testing web pages for cross-browser compatibility and responsiveness.
- Using browser developer tools for debugging and troubleshooting.
- Preparing web pages for deployment and publishing.
- Hosting and maintaining static websites.

8. Project Work:

- Applying the learned concepts and skills to create a complete static website.
- Incorporating responsive design, optimized graphics, and accessibility features.

	<ul style="list-style-type: none"> Testing, debugging, and refining the website based on feedback and evaluation.

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	<p>Introduction to Static Web Design:</p> <ul style="list-style-type: none"> • Overview of static web design and its role in website development. • Understanding the differences between static and dynamic websites. • Exploring the benefits and limitations of static web design.
Week 2	<p>HTML Fundamentals:</p> <ul style="list-style-type: none"> • Introduction to HTML markup and its structure. • Understanding HTML tags, elements, and attributes. • Creating and formatting text, headings, paragraphs, and lists.
Week 3	<p>HTML Fundamentals:</p> <ul style="list-style-type: none"> • Working with links, images, and multimedia content. • Creating tables for data representation.
Week 4	<p>CSS Basics:</p> <ul style="list-style-type: none"> • Introduction to CSS and its role in styling web pages. • Understanding CSS syntax, selectors, and properties. • Applying colors, backgrounds, and borders to elements.
Week 5	<p>CSS Basics:</p> <ul style="list-style-type: none"> • Controlling typography and font styles.

	<ul style="list-style-type: none"> Managing spacing and layout using margins, padding, and the box model.
Week 6	<p>Layout and Responsive Design:</p> <ul style="list-style-type: none"> Creating multi-column layouts using CSS. Understanding the concept of responsive web design. Using media queries to adapt layouts for different screen sizes.
Week 7	<p>Layout and Responsive Design:</p> <ul style="list-style-type: none"> Implementing flexible grids and fluid images. Applying responsive techniques to navigation menus and other elements.
Week 8	<p>Web Graphics and Optimization:</p> <ul style="list-style-type: none"> Optimizing images for web display, including compression techniques. Working with icon fonts and scalable vector graphics (SVG).
Week 9	<p>Web Graphics and Optimization:</p> <ul style="list-style-type: none"> Understanding the impact of file formats and sizes on page load times. Implementing techniques to improve web performance, such as caching and minification.
Week 10	<p>Accessibility and Best Practices:</p> <ul style="list-style-type: none"> Understanding the importance of web accessibility. Implementing accessibility features, such as alternative text for images and proper semantic markup.
Week 11	<p>Accessibility and Best Practices:</p> <ul style="list-style-type: none"> Following best practices for clean and maintainable code. Introduction to version control systems and collaboration tools.
Week 12	<p>Testing, Debugging, and Deployment:</p> <ul style="list-style-type: none"> Testing web pages for cross-browser compatibility and responsiveness. Using browser developer tools for debugging and troubleshooting.

Week 13	<p>Testing, Debugging, and Deployment:</p> <ul style="list-style-type: none"> • Preparing web pages for deployment and publishing. • Hosting and maintaining static websites.
Week 14	<p>Project Work:</p> <ul style="list-style-type: none"> • Applying the learned concepts and skills to create a complete static website. • Incorporating responsive design, optimized graphics, and accessibility features.
Week 15	<p>Project Work:</p> <ul style="list-style-type: none"> • Testing, debugging, and refining the website based on feedback and evaluation.
Week 16	Preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

	Material Covered
Week 1	<p>Lab 1: Introduction to HTML</p> <ul style="list-style-type: none"> • Setting up the development environment • Creating the basic structure of an HTML document • Working with text, headings, and paragraphs • Creating lists and adding images
Week 2	<p>Lab 2: HTML Advanced Concepts</p> <ul style="list-style-type: none"> • Creating hyperlinks and navigation menus • Formatting tables for data representation • Embedding multimedia content (audio, video) • Introduction to forms and form elements
Week 3	<p>Lab 3: CSS Basics</p> <ul style="list-style-type: none"> • Introduction to CSS and linking stylesheets • Applying colors, backgrounds, and borders

Week 4	<p>Lab 4: CSS Basics</p> <ul style="list-style-type: none"> • Controlling typography and fonts • Managing spacing and layout using margins, padding, and the box model
Week 5	<p>Lab 5: CSS Layouts and Positioning</p> <ul style="list-style-type: none"> • Creating multi-column layouts • Implementing float and clear properties
Week 6	<p>Lab 6: CSS Layouts and Positioning</p> <ul style="list-style-type: none"> • Using flexbox for flexible layouts • Positioning elements (relative, absolute, fixed)
Week 7	<p>Lab 7: Responsive Web Design</p> <ul style="list-style-type: none"> • Understanding responsive design principles • Using media queries for different screen sizes
Week 8	<p>Lab 8: Responsive Web Design</p> <ul style="list-style-type: none"> • Creating flexible grids and fluid images • Designing responsive navigation menus
Week 9	<p>Lab 9: Web Graphics and Optimization</p> <ul style="list-style-type: none"> • Optimizing images for the web (compression, formats) • Working with icon fonts and scalable vector graphics (SVG)
Week 10	<p>Lab 10: Web Graphics and Optimization</p> <ul style="list-style-type: none"> • Implementing performance optimization techniques • Caching and minification of web assets
Week 11	<p>Lab 11: Accessibility and Best Practices</p> <ul style="list-style-type: none"> • Introduction to web accessibility guidelines • Implementing accessibility features (alternative text, semantic markup)
Week 12	<p>Lab 12: Accessibility and Best Practices</p> <ul style="list-style-type: none"> • Following best practices for clean and maintainable code • Version control and collaboration using Git
Week 13	<p>Lab 8: Testing, Debugging, and Deployment</p> <ul style="list-style-type: none"> • Testing web pages for cross-browser compatibility • Using browser developer tools for debugging and troubleshooting • Preparing web pages for deployment and publishing • Hosting and maintaining static websites

Week14	<p>Lab Project: Complete Static Website Development</p> <ul style="list-style-type: none"> Applying the learned concepts and skills to create a full static website Incorporating responsive design, optimized graphics, and accessibility features Testing, debugging, and refining the website based on feedback and evaluation Documentation and final deployment of the website
Week15	<ul style="list-style-type: none"> Final Exam

Learning and Teaching Resources

مصادر التعلم والتدريس

	Text	Available in the Library?
Required Texts	<p>Textbook:</p> <ol style="list-style-type: none"> "Learning Web Design: A Beginner's Guide to HTML, CSS, JavaScript, and Web Graphics" by Jennifer Niederst Robbins, 5th edition, published in October 2018. "HTML and CSS: Design and Build Websites" by Jon Duckett, 2th edition , published in November 2014. 	Yes (E-copy)
Recommended Texts	"HTML and CSS: Visual QuickStart Guide" by Elizabeth Castro and Bruce Hyslop, 8th edition, published in September 2013.	Yes (E-copy)

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Aims</p> <p>أهداف المادة الدراسية</p>	<p>Here are some module aims typically associated with a Computer Vision course. These aims describe the overarching goals and objectives of the course:</p> <ol style="list-style-type: none">1. To provide students with a solid understanding of the fundamental concepts and principles of image processing.2. To familiarize students with the methods that are deal with image processing.3. To develop students' understanding of fundamentals of mathematics, enabling them to analyze images that are processed.4. To give students an opportunity to strongly understand and apply the well-known image processing methods and algorithms.5. To introduce students to the computer vision concepts.6. To clarify the relationship between image processing and computer vision.7. To introduces students to the fundamental concepts of computer vision providing an overview of the current methodologies and techniques.8. To enable students exploring the theory behind fundamental processing tasks, including segmentation, feature extraction, image classification, and object detection, using a mathematical framework to analyze images as two-dimensional signals. <p>This module aims to provide a broad overview of the goals and objectives of a Computer Vision course.</p>
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>Here are some module learning outcomes that are typically associated with a Computer Vision course. These outcomes represent the knowledge, skills, and competencies that students are expected to achieve upon completing the course:</p> <ol style="list-style-type: none">1. Understand the fundamental components and principles of image processing.2. Understand the fundamental components and principles of computer vision.3. By the end of this course, students will be able to apply the basic principles and tools used in image processing.4. Students will be able to apply the basic principles and tools used in computer vision.5. Students will be able to solve practical problems in scientific and commercial settings.
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

<p>Strategies</p>	<p>When teaching a Computer Vision course to beginners, it's important to adopt strategies that cater to their foundational understanding and gradually build their</p>
--------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------

knowledge and skills. Here are some effective learning and teaching strategies for beginners in a Computer Organization & Architecture course:

1. **Visual Aids and Analogies:** Use visual aids such as diagrams, charts, and illustrations to simplify complex concepts. Analogies comparing computer components to familiar real-world objects can make abstract ideas more relatable and easier to understand.
2. **Step-by-Step Approach:** Break down complex topics into smaller, manageable steps. Present the material in a sequential manner, building upon previously covered concepts. This helps beginners grasp the fundamentals before moving on to more advanced topics.
3. **Direct Activities:** Provide firsthand activities that allow beginners to interact with hardware components or simulation software. This can include assembling simple computer systems, performing basic circuit simulations, or writing simple programs. Direct activities reinforce learning and make abstract concepts more tangible.
4. **Practical Examples:** Use practical examples and real-life scenarios to demonstrate the relevance and application of the concepts being taught. Relate the material to everyday situations or commonly used technologies to help beginners connect theory to practice.
5. **Scaffolding:** Provide scaffolding support by gradually reducing assistance as students gain confidence and proficiency. Start with guided exercises and gradually increase the level of complexity and autonomy. This helps beginners develop their critical thinking skills and independent thinking.
6. **Interactive Discussions:** Encourage interactive discussions to promote active engagement and peer learning. Beginners can ask questions, share their perspectives, and learn from their classmates' experiences. This fosters a supportive learning environment where beginners can build their understanding collaboratively.
7. **Concept Mapping and Summarizing:** Encourage beginners to create concept maps or summaries of the material covered. Concept maps visually organize the relationships between different concepts, while summaries help reinforce understanding and retention.
8. **Concrete Examples:** Use concrete examples and familiar scenarios to explain abstract concepts. Relate computer organization and architecture to everyday experiences, such as explaining how a CPU functions like the brain of a computer or how cache memory is like a high-speed storage closet.
9. **Incremental Assessments:** Break assessments into smaller, incremental tasks to evaluate and reinforce learning along the way. This can include quizzes, short assignments, or mini projects that gradually increase in complexity as beginners progress through the course.
10. **Encourage Questions:** Create a supportive environment that encourages beginners to ask questions without hesitation. Answer questions patiently and provide explanations in a clear and accessible manner. This helps beginners clarify their doubts and deepen their understanding.
11. **Provide Additional Resources:** Offer supplementary resources, such as textbooks, online tutorials, and reference materials, to support beginners' learning outside the classroom. These resources can provide alternative explanations, additional examples, and further practice opportunities.
12. **Regular Feedback and Guidance:** Provide timely and constructive feedback on assignments and assessments to guide beginners' progress. Highlight their

	<p>strengths and provide specific suggestions for improvement to help them grow and build confidence.</p> <p>By employing these strategies, you can create an inclusive and supportive learning environment for beginners in a Computer Organization & Architecture course. Adjust the pace and depth of the course to accommodate their learning needs and gradually build their knowledge and skills in the subject.</p>

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	<p>The exposure of the students to Cyber Security should lead to the following:-</p> <ul style="list-style-type: none"> (a) Learn the foundations of Cyber security and threat landscape. (b) To equip students with the technical knowledge and skills needed to protect and defend against cyber threats. (c) To develop skills in students that can help them plan, implement, and monitor cyber security mechanisms to ensure the protection of information technology assets. (d) To expose students to governance, regulatory, legal, economic, environmental, social and ethical contexts of cyber security. (e) To expose students to responsible use of online social media networks. (f) To systematically educate the necessity to understand the impact of cyber crimes and threats with solutions in a global and societal context. (g) To select suitable ethical principles and commit to professional responsibilities and human values and contribute value and wealth for the benefit of the society.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<p>Upon completion of the degree program, students will be able to:-</p> <ul style="list-style-type: none"> (a) Understand the cyber security threat landscape. (b) Develop a deeper understanding and familiarity with various types of cyberattacks, cyber crimes, vulnerabilities and remedies thereto. (c) Analyse and evaluate existing legal framework and laws on cyber security. (d) Analyse and evaluate the digital payment system security and remedial measures against digital payment frauds. (e) Analyse and evaluate the importance of personal data its privacy and security. (f) Analyse and evaluate the security aspects of social media platforms and ethical aspects associated with use of social media. (g) Analyse and evaluate the cyber security risks. (h) Based on the Risk assessment, plan suitable security controls , audit and compliance. (i) Evaluate and communicate the human role in security systems with an emphasis on ethics, social engineering vulnerabilities and training.

	(j) Increase awareness about cyber-attack vectors and safety against cyber-frauds. (k) Take measures for self-cyber-protection as well as societal cyber-protection.
Indicative Contents المحتويات الإرشادية	<ul style="list-style-type: none"> • Introduction to Cyber security. • Cyber crime and Cyber law. • Social Media Overview and Security. • E - Commerce and Digital Payments. • Digital Devices Security , Tools and Technologies for Cyber Security.

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering types of simple experiments involving some sampling activities that are interesting to the students.

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Objectives</p> <p>أهداف المادة الدراسية</p>	<ol style="list-style-type: none">1. Understand the role and significance of operating systems in modern computer systems.2. Comprehend the basic functionalities and components of operating systems.3. Explore various operating system structures, designs, and implementation techniques.4. Analyze the mechanisms for process management, including process creation, scheduling, synchronization, and communication.5. Study memory management techniques, such as virtual memory, paging, and segmentation.6. Investigate file systems and their organization, including file organization, access methods, and disk management.7. Examine input/output (I/O) systems, device management, and the handling of interrupts.8. Discuss the concepts of protection and security in operating systems.9. Evaluate performance evaluation and tuning techniques for operating systems.10. Explore emerging trends and advancements in operating systems, such as distributed systems, virtualization, and cloud computing.
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>Upon successful completion of the Operating Systems course, students should be able to:</p> <ol style="list-style-type: none">1. Explain the key functions and significance of operating systems in modern computer systems.2. Identify and describe the major types of operating systems, their characteristics, and their applications.3. Understand the fundamental concepts and components of operating systems, including processes, threads, and scheduling algorithms.4. Analyze and evaluate process management techniques, such as process creation, synchronization, and communication.5. Demonstrate knowledge of memory management techniques, including virtual memory, paging, and segmentation.6. Design and implement file systems, considering file organization, access methods, and disk management strategies.7. Understand input/output systems, device management, and interrupt handling in operating systems.8. Discuss the concepts of protection and security in operating systems, including access control and cryptography techniques.9. Apply performance evaluation and tuning techniques to optimize the

	<p>performance of operating systems.</p> <p>10. Explore and discuss emerging trends and advancements in operating systems, such as distributed systems, virtualization, and cloud computing.</p> <p>By achieving these learning outcomes, students will have a solid understanding of operating system principles, allowing them to effectively analyze, design, and implement operating systems and make informed decisions regarding their usage and configuration in various computing environments.</p>
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<p>Here are some common topics that are typically covered in an Operating Systems course:</p> <ol style="list-style-type: none"> 1. Introduction to Operating Systems: <ul style="list-style-type: none"> • Definition and goals of an operating system • Evolution and historical perspective of operating systems • Major types of operating systems (batch, time-sharing, real-time, distributed) • Operating system services and functionalities 2. Process Management: <ul style="list-style-type: none"> • Process concept and process states • Process scheduling algorithms (e.g., FCFS, SJF, Round Robin) • Process synchronization and mutual exclusion • Inter-process communication mechanisms • Deadlock detection and prevention techniques 3. Memory Management: <ul style="list-style-type: none"> • Address spaces and memory partitioning • Memory allocation strategies (e.g., contiguous allocation, paging, segmentation) • Virtual memory concepts and techniques • Page replacement algorithms (e.g., FIFO, LRU) • Memory protection and sharing 4. File Systems: <ul style="list-style-type: none"> • File concept and file organization • Directory structures and file operations • File allocation methods (e.g., contiguous, linked, indexed) • Disk scheduling algorithms (e.g., FCFS, SSTF, SCAN) • File system implementation and maintenance 5. Input/Output Systems: <ul style="list-style-type: none"> • I/O devices and device drivers • I/O operations and buffering • Interrupt handling and interrupt-driven I/O

	<ul style="list-style-type: none"> • Disk management and scheduling • File system consistency and recovery <p>6. Process Communication and Synchronization:</p> <ul style="list-style-type: none"> • Shared memory and message passing mechanisms • Semaphores, monitors, and locks for synchronization • Classical synchronization problems (e.g., producer-consumer, readers-writers) • Interprocess communication protocols and mechanisms <p>Protection and Security:</p> <ul style="list-style-type: none"> • Access control and permissions • User authentication and authorization • Security threats and vulnerabilities • Cryptography and encryption techniques • Security mechanisms in operating systems
--	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<p>Learning and Teaching Strategies</p> <p>استراتيجيات التعلم والتعليم</p>	
<p>Strategies</p>	<p>In the context of the Operating Systems course, here are some strategies that can help students excel:</p> <ol style="list-style-type: none"> 1. Active Participation: Actively engage in class discussions, ask questions, and contribute to group activities. This promotes a deeper understanding of the material and encourages critical thinking. 2. Take Detailed Notes: Take thorough and organized notes during lectures, ensuring you capture key concepts, definitions, and examples. Review and summarize your notes regularly to reinforce your understanding. 3. Practice Programming: Operating Systems often involve programming assignments. Dedicate time to practice programming concepts related to processes, memory management, file systems, and I/O operations.

Experiment with sample code and work on programming projects to strengthen your skills.

4. **Hands-on Labs:** Make the most of the hands-on lab sessions provided in the course. These sessions offer an opportunity to apply theoretical knowledge and gain practical experience with operating system concepts. Complete lab exercises diligently and seek help from instructors or teaching assistants if needed.
5. **Read the Recommended Textbooks:** Consult the recommended textbooks and supplementary reading materials suggested by the course instructor. These resources provide additional explanations, examples, and insights into operating system concepts. Read actively, take notes, and reflect on the content.
6. **Collaborate with Peers:** Form study groups or join online discussion forums with classmates to discuss and review course materials. Collaborative learning can deepen your understanding by exposing you to different perspectives and approaches.
7. **Review and Reinforce:** Regularly review your notes, textbooks, and assignments to reinforce your understanding of operating system concepts. Look for connections between different topics and strive to develop a holistic understanding of how the various components of an operating system interact.
8. **Seek Clarification:** Do not hesitate to seek clarification from the instructor or teaching assistants if you have any doubts or questions. Clarifying misunderstandings early on can prevent confusion later and ensure a solid foundation for advanced topics.
9. **Explore Real-world Examples:** Supplement your learning by exploring real-world examples of operating systems and their applications. Investigate case studies, research papers, or industry articles to gain insight into practical implementations and emerging trends.
10. **Practice Time Management:** Plan your study time effectively to ensure you allocate sufficient time for reading, assignments, and exam preparation.

Create a schedule and adhere to it, breaking down complex tasks into manageable segments.

Week 14	Performance Evaluation and Tuning
Week 15	Emerging Trends in Operating Systems
Week 16	Preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

	Material Covered
Week 1	<p>Lab 1: Introduction to Operating System Environment</p> <ul style="list-style-type: none">• Setting up the development environment (e.g., virtual machines, emulators)• Familiarization with command-line interfaces and basic shell commands• Exploring system utilities and tools for system monitoring and troubleshooting
Week 2	<p>Lab 2: Process Management</p> <ul style="list-style-type: none">• Implementing process creation and termination routines• Designing and implementing process scheduling algorithms (e.g., Round Robin, Priority Scheduling)• Simulating and analyzing the behavior of different scheduling algorithms• Implementing inter-process communication mechanisms (e.g., shared memory, message passing)
Week 3	<p>Lab 3: Memory Management</p> <ul style="list-style-type: none">• Implementing memory allocation algorithms (e.g., First Fit, Best Fit, Buddy System)• Simulating and analyzing the behavior of different memory allocation algorithms• Implementing virtual memory techniques (e.g., page tables, demand paging)• Evaluating the performance impact of different page replacement algorithms
Week 4	<p>Lab 4: File System Implementation</p> <ul style="list-style-type: none">• Designing and implementing basic file operations (e.g., create, delete, read, write)• Implementing file allocation methods (e.g., contiguous, linked, indexed)• Simulating and evaluating the performance of different file allocation methods• Implementing directory structures and file access control mechanisms
Week 5	<p>Lab 5: I/O System and Device Management</p> <ul style="list-style-type: none">• Implementing device driver routines for I/O devices• Handling interrupts and implementing interrupt-driven I/O• Analyzing and optimizing disk scheduling algorithms

	<ul style="list-style-type: none"> • Simulating and benchmarking I/O performance for different devices and workloads
Week 6	<p>Lab 6: Process Synchronization and Deadlock Avoidance</p> <ul style="list-style-type: none"> • Implementing synchronization primitives (e.g., semaphores, monitors, locks) • Solving classical synchronization problems (e.g., producer-consumer, readers-writers) • Analyzing and detecting deadlock scenarios • Implementing deadlock avoidance techniques (e.g., resource allocation graphs)
Week 7	Mid-term Exam
Week 8	<p>Lab 7: Protection and Security Mechanisms</p> <ul style="list-style-type: none"> • Implementing access control mechanisms (e.g., permissions, access control lists) • Designing and implementing user authentication and authorization routines • Exploring cryptographic algorithms and implementing encryption techniques • Analyzing and mitigating common security threats in an operating system
Week 9	<p>Lab 8: Performance Analysis and Optimization</p> <ul style="list-style-type: none"> • Profiling and monitoring system performance using performance measurement tools • Analyzing and optimizing CPU scheduling policies • Evaluating and optimizing I/O performance • Analyzing system resource utilization and identifying performance bottlenecks
Week 10	<p>Lab 9: Distributed Systems and Virtualization</p> <ul style="list-style-type: none"> • Setting up a simple distributed system environment • Implementing remote procedure calls (RPC) or message passing between distributed processes • Exploring virtualization technologies and setting up virtual machines • Experimenting with containerization technologies (e.g., Docker)
Week 11	<p>Lab 10: Case Study and Project</p> <ul style="list-style-type: none"> • Analyzing and discussing case studies of real-world operating systems • Working on a project that involves implementing an operating system component or exploring an emerging operating system topic • Presenting and demonstrating the project to the class

Learning and Teaching Resources مصادر التعلم والتدريس		
	Text	Available in the Library?
Required Texts	<p>"Operating System Concepts" by Abraham Silberschatz, Peter B. Galvin, and Greg Gagne.</p> <p>This widely used textbook provides a comprehensive introduction to operating systems, covering the fundamental concepts, principles, and implementation details.</p>	Yes
Recommended Texts	<ol style="list-style-type: none"> 1. "Modern Operating Systems" by Andrew S. Tanenbaum and Herbert Bos. 2. This book offers a thorough examination of modern operating system design and implementation, including topics such as process management, memory management, file systems, and security. 3. "Operating Systems: Internals and Design Principles" by William Stallings. 4. This textbook provides an in-depth exploration of operating system internals, focusing on design principles, algorithms, and system components. It covers topics such as process management, memory management, file systems, and distributed systems. 	No

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering types of simple experiments involving some sampling activities that are interesting to the students.

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims	
-------------	--

<p>أهداف المادة الدراسية</p>	<ol style="list-style-type: none"> 1. Getting students ready to keep up with new developments in computer science. 2. Students gain practical experience with several modern Topic(s) such as (Bigdata, Data Science, Machine learning and so on) 3. Getting an integrated plan to delve deeper into these topics and what is the road map to access them. 4. Educating students to better compete in the job market. 5. This is the basic subject for all Topic(s).
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<ol style="list-style-type: none"> 1. Refresh students' knowledge of their field of study. 2. List the various terms associated with Topic(s). 3. Summarize what is meant by a basic Topic(s). 4. Discuss the reaction and involvement of Topic(s). 5. Introducing the student to the road map for the Topic(s) and what steps need to be followed.
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<p>Indicative content includes the following.</p> <p><u>Part A - Computing Theory</u></p> <p>Computer Generations – A timeline of the evolution of computer generations. Introduce the student to the future direction of computing, for example using a Quantum computer. [9 hrs]</p> <p>Computer science specializations – This includes the newest developments in computer science, such as new and future disciplines, frameworks, and modern programming languages. [9 hrs]</p> <p>Preparing and presenting the academic report - Preparing the student to understand the basics of writing and presenting the academic report in a clear and concise manner. [6 hrs]</p> <p>Problem Solving - Identify the most important steps to solving software problems. Provide some examples of this in practice as well. [15 hrs]</p> <p><u>Part B - Advanced Topics in Computer Science</u></p> <p>Fundamentals</p> <p>Distributed Systems, Parallel computing, Cloud computing and 5G and 4G technologies. Where these technologies are seen as the most important parts of the modern generation's growing technological progress. [18 hrs]</p>

	Topic(s) in Computer Science – Machine Learning Approaches, Deep Learning Approaches, Big data, Data Science, wireless sensor network. [18 hrs]
--	-------------------------------------------------------------------------------------------------------------------------------------------------

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be for this rich course will teach students the latest and most important developments in computer science. Which helps prepare computer science graduates capable of adapting to the job market. Also, by teaching students to write reports and make simple presentations while improving their critical thinking skills and effective ways to solve programming problems. In addition, interactive classrooms and tutorials will help students design simple experiments for the sampling activities they need. It must be mentioned that this course will be changing according to the department's directions to change topics in the field of computer science.

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	<ol style="list-style-type: none"> 1. Understand what cloud computing is and why it is important. 2. Get a picture of the economics of cloud computing. 3. Learn about many fundamental technologies that enable cloud computing, such as software defined architectures, virtualization, and containers.
--------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	<ol style="list-style-type: none"> 4. Learn about the different levels of clouds services, which include IaaS (Infrastructure as a Service), PaaS (Platform as a Service), SaaS (Software as a Service), MaaS (Metal as a Service), FaaS (Function as a Service (server-less architecture)). 5. Compare the advantages and disadvantages of various cloud computing platforms. 6. Analyze the performance, scalability, and availability of the underlying cloud technologies and software
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<ol style="list-style-type: none"> 1. Analyze the trade-offs between deploying applications in the cloud and over the local infrastructure. 2. Compare the advantages and disadvantages of various cloud computing platforms. 3. Deploy applications over commercial cloud computing infrastructures such as Amazon Web Services, Windows Azure, and Google AppEngine. 4. Program data intensive parallel applications in the cloud. 5. Analyze the performance, scalability, and availability of the underlying cloud technologies and software. 6. Identify security and privacy issues in cloud computing. 7. Explain recent research results in cloud computing and identify their pros and cons. 8. Solve a real-world problem using cloud computing through group collaboration.
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<p>Indicative content includes the following:</p> <ul style="list-style-type: none"> • <u>Introduction to Cloud Computing:</u> <ul style="list-style-type: none"> • Defining Cloud Computing. • Exploring the roots of Cloud Computing. (2 hours) • Cloud Computing Deployment Models: <ul style="list-style-type: none"> • Overview of different deployment models such as public, private, hybrid, and community clouds. (2 hours) • Cloud Service Models: <ul style="list-style-type: none"> • Understanding Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). (2 hours) • Characteristics of Cloud Computing: <ul style="list-style-type: none"> • Examining the characteristics and key features of Cloud Computing. • Analyzing the advantages and disadvantages of adopting Cloud Computing. (4 hours) • Cloud Computing Architecture Layers: <ul style="list-style-type: none"> • Exploring the different layers of Cloud Computing architecture, including infrastructure, platform, and software layers. • Understanding the interactions and dependencies between these layers. (3 hours) • Cloud Computing Methodologies: <ul style="list-style-type: none"> • Overview of methodologies and best practices for implementing and managing Cloud Computing solutions. (2 hours) • Cloud Application Architecture: <ul style="list-style-type: none"> • Understanding the design principles and components of Cloud application architecture. • Exploring scalable and resilient application architectures. (3 hours) • Virtualization Concepts: <ul style="list-style-type: none"> • Introduction to virtualization technologies and their role in Cloud Computing. • Understanding virtual machines, hypervisors, and containerization. (3 hours) • Moving Applications into the Cloud: <ul style="list-style-type: none"> • Strategies and considerations for migrating applications to the Cloud. • Exploring tools and techniques for seamless application migration. (3 hours)

	<ul style="list-style-type: none"> • Security in Cloud Computing: <ul style="list-style-type: none"> • Understanding the security challenges and measures in Cloud Computing. • Exploring authentication, access control, data protection, and compliance in the Cloud. (4 hours) • Basics of Cloud Management: <ul style="list-style-type: none"> • Overview of Cloud management techniques and tools. • Understanding resource provisioning, monitoring, and optimization in the Cloud. (3 hours) • Cloud Migration: <ul style="list-style-type: none"> • Exploring the process and challenges of migrating systems and data to the Cloud. • Understanding the importance of planning, testing, and executing a successful migration. (3 hours) • Daily Life Cloud Applications: <ul style="list-style-type: none"> • Examining practical applications of Cloud Computing in everyday life. • Understanding how Cloud services impact various industries and sectors. (2 hours) • Examples of Cloud Computing Applications: <ul style="list-style-type: none"> • Studying prominent examples of Cloud Computing applications such as Google, Azure platform, and Amazon Web Services. • Exploring other Cloud-based applications found on the Internet, such as Force.com, SoundCloud, HyperOffice, and MyMusicCloud. (3 hours)

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering types of simple experiments involving some sampling activities that are interesting to the students.

Student Workload (SWL) الحمل الدراسي للطالب محسوب ل ١٥ اسبوعا			
Structured SWL (h/sem)	109	Structured SWL (h/w)	7

الحمل الدراسي المنتظم للطلاب خلال الفصل		الحمل الدراسي المنتظم للطلاب أسبوعيا	
Unstructured SWL (h/sem) الحمل الدراسي غير المنتظم للطلاب خلال الفصل	91	Unstructured SWL (h/w) الحمل الدراسي غير المنتظم للطلاب أسبوعيا	6
Total SWL (h/sem) الحمل الدراسي الكلي للطلاب خلال الفصل	200		

Module Evaluation

تقييم المادة الدراسية

		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	1	10% (10)	5 and 10	LO #1, #2 and #10, #11
	Assignments	2	20% (20)	2 and 12	LO #3, #4 and #6, #7
	Projects / Lab.	0	0% (0)		
	Report	0	0% (0)		
Summative assessment	Midterm Exam	2hr	20% (20)	7	LO #1 - #7
	Final Exam	3hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Introduction to Cloud Computing.
Week 2	Defining the Cloud Computing, the roots of Cloud Computing
Week 3	Cloud Computing Deployment models, Cloud service models (IaaS, PaaS, SaaS).

Week 4	Characteristics of Cloud Computing/ advantages and disadvantages of adopting Cloud Computing
Week 5	Cloud Computing Architecture layers, Cloud Computing methodologies.
Week 6	Cloud application architecture
Week 7	Virtualization Concepts
Week 8	How to move application into the cloud
Week 9	Security in Cloud Computing.
Week 10	Basics of Cloud Management
Week 11	Cloud Migration
Week 12	Daily life Cloud's Application
Week 13	Examples of Cloud Computing applications: Google, Azure platform, Amazon Web Services. Other examples on the Internet such as Force.com, SoundCloud, HyperOffice, MyMusicCloud
Week 14	Collaborating using Google Cloud
Week 15	Disaster Recovery
Week 16	Preparatory week before the final Exam

Learning and Teaching Resources

مصادر التعلم والتدريس

	Text	Available in the Library?
Required Texts	Surianarayanan, C., & Chelliah, P. R. (2019). Essentials of Cloud Computing.	No
Recommended Texts	L. Wang, R. Ranjan, J. Chen, and B. Benatallah, <i>Cloud Computing: Methodology, Systems, and Applications</i> , CRC Press, Boca Raton, FL, USA, ISBN: 9781439856413, October 2021.	No
Websites	Technical papers from major journals and major conferences on computing, networking, cloud computing	

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks %	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 – 49)	FX – Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F – Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.
