

Shatt Al-Arab University College organized a workshop entitled **(Weather System Using Cross-Platform (WSUCP))** on 17 Feb 2021. The workshop touched on the importance of **SDG13: Climate Action**.

The workshop focused on the mission of Climate Action to "Take prompt action to mitigate climate change and its repercussions" is the official mission statement for this objective.

In addition, to keep warming at 1.5oC and avoid the worst effects of climate change, research demands that greenhouse gas emissions peak immediately and then decline to zero by 2050. Improving business knowledge through measuring and communicating environmental effects is critical for carbon and climate risk management.
