*Description of the academic
program and the course
2025-2026*

College of Engineering – Gas and Oil Department

*Prepared by
Quality Assurance Unit*

Introduction:

An academic program is defined as a well-coordinated and structured package of curricula, encompassing sequential educational procedures and learning experiences. Its primary objective is to cultivate and refine graduates' skills, thereby enhancing their employability and alignment with labor market demands. To ensure continuous quality, programs undergo annual evaluation and review through both internal and external auditing mechanisms, such as the External Examiner System.

The Academic Program Description provides a concise summary of the program's core features and its constituent courses, explicitly outlining the intended learning outcomes and skills aligned with the program's strategic goals. The significance of this document lies in its role as a cornerstone for securing programmatic accreditation. It is collaboratively authored by the faculty and vetted by the scientific committees within their respective departments.

This guide delivers an updated framework for the Academic Program Description, reflecting recent developments and updates within the Iraqi higher education system. It accommodates both traditional semester-based systems and programs utilizing the newly adopted Bologna Process. In conclusion, we emphasize that the precise documentation of academic programs and course descriptions remains vital to ensuring the quality and successful execution of the educational process.

Concepts and Terminology:

- **Academic Program Description:** A concise summary that outlines the program's vision, mission, and strategic objectives, providing a precise articulation of the intended learning outcomes (ILOs) alongside specific teaching and learning strategies.
- **Course Description:** A brief overview of a course's core characteristics and its expected learning outcomes, demonstrating how students can maximize the available learning opportunities. It is systematically derived from the overarching Academic Program Description.
- **Program Vision:** An ambitious, forward-looking statement that inspires and motivates, presenting a progressive yet realistic and achievable future state for the academic program.
- **Program Mission:** A concise statement defining the program's core purpose, goals, and necessary activities, while establishing its developmental trajectories and future directions.
- **Program Objectives:** Clear, measurable, and observable statements that describe what the academic program intends to achieve within a designated timeframe.
- **Curriculum Structure:** The complete assembly of courses and modules comprising the academic program under the adopted educational system (e.g., Semester System, Bologna Process), detailed alongside their respective credit hours or units.
- **Learning Outcomes:** An integrated set of knowledge, skills, and values acquired by students upon successful completion of the academic program. Learning outcomes must be explicitly defined for each course to ensure they align with and fulfill the overall program goals.
- **Teaching and Learning Strategies:** The structured pedagogical frameworks implemented by faculty members to enhance student learning. These strategies encompass all in-class and extracurricular activities designed to achieve the program's intended learning outcomes.

Course Description

Course Description

This course description provides a brief summary of the most significant characteristics of the course and the learning outcomes that the student is expected to achieve, demonstrating how they can maximize the available learning opportunities. It must be explicitly linked and aligned with the overarching Academic Program Description.

1. Educational Institution	Shatt Al-Arab University
2. Scientific Department / Center	College of Engineering
3. Academic Program Name	Department of Gas and Oil
4. Final Degree	Bachelor of Science (B.Sc.) in Civil Engineering
5. Educational System	Bologna Process
6. Accreditation Program	N/A (No cohort has graduated yet)
7. Date of Description Preparation	September 1, 2025

8. Course outcomes and methods of teaching, learning, and assessment

A. Cognitive Objectives (Knowledge and Understanding):

1. Cognitive Qualification: Providing students with the scientific and theoretical foundations related to the oil and gas industry, and understanding the basic principles of exploration, drilling, production, reservoir engineering, and petroleum facilities.
2. Practical Linkage: Enabling students to link mathematical, physical, chemical, and geological concepts with engineering applications and solutions in oil and gas fields and facilities.
3. Professional Qualification: Equipping students with the necessary skills to handle engineering problems in the oil and gas sector, apply engineering standards, codes, and specifications, and efficiently conduct calculations, testing, and data analysis,

while considering occupational health, safety, and environmental protection requirements.

B. Intellectual and Course-Specific Skills:

- Here is the English translation of these outcomes:
- B1- Possesses the ability to analyze engineering problems related to oil and gas wells, reservoirs, and production operations using scientific and methodical approaches.
- B2- Analyzes geological, petrophysical, well, and production data, and accurately conducts the necessary engineering and mathematical calculations.
- B3- Utilizes modern software and technical tools standard in petroleum engineering to analyze, design, and simulate oil and gas operations, such as Petrel, Eclipse, PIPESIM, WellFlo, and other specialized software.

C. Affective and Value-Based Objectives (Attitudes and Professionalism):

- Here is the English translation of these outcomes:
- C1- Develops critical and engineering thinking, and the ability to make decisions related to oil and gas operations to achieve safety, economic efficiency, and sustainability requirements.
- C2- Commits to professional ethics, academic and professional integrity, and accuracy in conducting calculations, testing, data analysis, and preparing technical reports.
- C3- Demonstrates the ability to work collaboratively within multidisciplinary engineering teams, including petroleum engineering, geology, drilling and production engineering, mechanical engineering, and electrical engineering.

D. General and Transferable Skills (Employability and Personal Development):

- D1- Effectively manages time and resources in oil fields, petroleum facilities, and engineering offices, and commits to completing tasks and technical reports within set deadlines.
- D2- Communicates engineering concepts with high efficiency, both orally and in writing, through preparing technical reports, presentations, and engineering blueprints, data, and tables related to oil and gas operations.
- D3- Possesses self-learning and continuous learning skills to keep pace with modern developments in exploration, drilling, production technologies, reservoir engineering, and digitalization and artificial intelligence (AI) in the oil and gas industry.

9. Teaching and Learning Strategies:

- 1- Theoretical Lectures: Presenting basic concepts and theories in oil and gas engineering, with the activation of brainstorming methods, scientific discussion, and field case studies.
- 2- Exercise and Laboratory Sessions: Conducting laboratory experiments and tests related to the properties of rocks and reservoir fluids, and applying mathematical and engineering solutions to oil and gas problems.
- 3- Project-Based Learning: Preparing mini-projects that simulate real-world applications in the oil and gas industry, such as analyzing well data, production calculations, reservoir analysis, designing drilling operations, or simulating flow and production.
- 4- Learning Using Engineering Software: Training students to use specialized programs in analyzing and simulating oil and gas operations and interpreting engineering results.
- 5- Field Case Studies: Analyzing real-world problems from oil and gas fields and linking the theoretical aspect to practical application.
- 6-

10. Assessment Methods and Matrix:

		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes / Tests	2	10% (10)		
	Assignments / Tasks	2	10% (10)		
	Projects / Lab Practice	1	10% (10)		
	Technical Reports	1	10% (10)		
Summative assessment	Midterm Examination	2hr	10% (10)		
	Final Examination	2hr	50% (50)		
Total assessment			100% (100 Marks)		

11. Evaluation Framework & Criteria:

Active participation and scientific interaction during lectures.
Homework submissions and engineering assignments.
Technical and laboratory reports.
Short evaluation quizzes.
Practical applications and course mini-projects.
Formative midterm and summative final examinations.

Evaluating the student's capability to analyze **civil engineering problems** and accurately interpret engineering findings.

12. Program Structure:

						Total	17	0	4	3	4	0	12	432	318	750	30.00	

13. Personal Development Planning (PDP)

- 1. E-Learning:** Engaging with digital educational platforms, virtual learning environments (VLEs), and synchronous/asynchronous online course delivery modes.
- 2. Utilization of the World Wide Web and the Internet:** Leveraging online networks, academic databases, global informational repositories, and web-based research tools for knowledge acquisition.
- 3. Utilization of Modern Communication Methods:** Mastering advanced digital interaction tools, cloud-based collaborative platforms, and computer-mediated communication channels to enhance professional networking.

14. Admission Criteria (Regulations Governing College or Institute Enrollment)

- 1. Central Admission System:** Student enrollment is regulated through the national Central Admission framework managed by the Ministry of Higher Education and Scientific Research (MOHESR).

2. Student Grade Point Average (GPA) & Preferences: Students are allocated and distributed among specialized academic departments based on their high school GPA thresholds in alignment with their prioritized preference lists.

University Web Domain and Location

Institutional Identity: Shatt Al-Arab University.

Official Web Portal: <https://www.sa-uc.edu.iq>

15. Course Development Plan:

- **Alignment with the Labor Market:** Periodically reviewing the content of lectures and exercises to link them with the requirements of oil and gas companies and current field operations in Iraq, with a specific focus on exploration, drilling, production, and reservoir engineering applications.
- **Digital Transformation:** Intensifying the utilization of specialized engineering software in the oil and gas industry, as well as simulation, modeling, and well/reservoir data analysis programs, to enhance students' digital skills and reduce reliance on traditional manual solutions.
- **Laboratory Environment Development:** Updating laboratories and practical experiments to align with modern applications in petroleum engineering, and upgrading laboratory test templates and reports in accordance with approved specifications and standards, while promoting the use of modern devices and software in analyzing rock and reservoir fluid properties.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Aims</p> <p>أهداف المادة الدراسية</p>	<ul style="list-style-type: none"> ☐ To enable the students to identify the tools/instrument needed. ☐ To familiarize the student, with the proper techniques, manipulation, uses, and care of the drawing instruments. ☐ To introduce the students to a specific language of engineers which is a graphical language. ☐ To help and guide the students to learn how technical drawings can be drawn in different methods. ☐ To acquire some different skills such as the ability to read and prepare engineering drawings, the ability to make free-hand sketching of objects, the power to imagine, analyze, and communicate, and the capacity to understand other subjects. ☐ To acquire adequate skills in measuring/scaling dimension accurately, and the method of placing dimensions. ☐ To acquire basic analysis skills in orthographic/section/isometric drawing ☐ To know the proper drawing conventions/symbols to describe the engineering drawings.
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<ol style="list-style-type: none"> 1- Get information about the important tools for engineering drawing. This will give student basic knowledge of technical drawings professions and means of communications to others. 2- Knowing the types of lines and their applications in technical drawings. 3- Learning the steps to construct different geometric figures like lines, arcs, polygon, ellipse etc. which is essential for engineer. 4- Comprehend general projection theory, with emphasis on orthographic projection to represent three-dimensional objects in two-dimensional views. 5- Develop student's imagination and ability to represent the shape size and specifications of physical objects. 6- Learning how to draw sectional views. 7- Knowing how to place dimensions on engineering drawings. 8- Equipped with the skill that enables the students to convert orthographic projection into isometric projection.

<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<p>Introduction to Engineering Drawing, Drawing Tools, Pencils, Drawing Sheets, Title Block of a Sheet, Types of Lines and their Uses. (10 hrs)</p> <p>Exercises in the Use of Instruments: Straight lines (Solid, Dashed and Center Lines), Circles and Tangents. (10 hrs)</p> <p>Graphic Geometry: Bisections, Parallels, Divisions, Angles, Geometric Shapes Tangents (Straight and Curved Lines), Ellipse. (30 hrs)</p> <p>Orthographic Projection: Theory, Orthographic Views, Representation of</p>
--	---

	<p>Lines, Hidden Features, Center Lines. Precedence of Lines, Exercises in Projection. (30 hrs)</p> <p>Sectional Views: Definition, Classification, Full and Half Sections, Exercises in Sectional Views. (20 hrs)</p> <p>Dimensioning Practices: Introduction, Terminology and Conventions, Exercises in Dimensioning. (10 hrs)</p> <p>Introduction to Types of Pictorial Drawing: Pictorial Methods Classified, Isometric. (10 hrs)</p> <p>Isometric Drawing: Perspective Drawing, Sketching, Layout of Circles, Exercises in Isometric Drawings. (30 hrs)</p>
--	--

<p>Learning and Teaching Strategies</p> <p>استراتيجيات التعلم والتعليم</p>	
<p>Strategies</p>	<p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, lectures and by considering a variety of assignments that are interesting to the students.</p>

Module Evaluation					
تقييم المادة الدراسية					
		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	<ol style="list-style-type: none"> 1. Good understanding of General Mathematics. 2. To give information about Integrations and derivations and how they are used in the physics field. 3. Helping students to connect mathematics with physics. 4. solving mathematical examples in their physics modules. 5. better understanding of integration and derivations and their importance of them in physics.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<p>After successful completion of the module, students should be able to:</p> <ol style="list-style-type: none"> 1. Work with functions represented in various ways: graphical, numerical, analytical, or verbal. They should understand the connections among these representations. The functions include linear, polynomial, absolute value, rational, exponential, logarithmic, trigonometric, inverse trigonometric, hyperbolic, inverse hyperbolic, and piecewise defined functions. 2. Define and apply the concepts of limits and continuity to the mentioned functions and study them graphically and analytically. 3. Understand the meaning of the derivative in terms of a rate of change and local linear approximation, and should be able to use derivatives to solve a variety of problems. 4. Understand the meaning of the definite integral both as a limit of Riemann sums as the net accumulation of change and should be able to use integrals to solve a variety of problems. 5. Understand the relationship between the derivative and the definite integral as expressed in both parts of the Fundamental Theorem of Calculus. 6. Use various integration techniques to obtain anti-derivatives without an integral table or calculator.
Indicative Contents المحتويات الإرشادية	
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	

Strategies	<ul style="list-style-type: none"> Different forms of teaching will be used to come across with objectives of the course. PowerPoint presentations for the head titles, definitions, graphs, and many useful illustrations with a summary at the end of each chapter will be presented and discussed. The PowerPoint contains information about new topics and unsolved examples, and then the whiteboard will be used to solve them and to let students to see the solutions.

	Material Covered
Week 1	Algebraic Preliminaries Numbers, Sets, Inequalities & Absolute value.
Week 2	Functions Domain, Range, graphs, Symmetry, Asymptotes.
Week 3	Limits Definition of Limit, Theorems, Continuity, One-Sided Limits, Limits at Infinity, L Hopital's rule.
Week 4	Derivatives Definition, Power and Sum Rules, Product and Quotient Rules, Chain rule, High-Order derivatives, Implicit differentiation.
Week 5	Applications of Derivative Maximum and minimum, mean value theorem, Increasing and Decreasing Functions, Concavity and Points of inflection, Second Derivative Test.
Week 6	Definite Integration Definition, Integral Theorems, Length of a Curve, Areas, Volume of Solids, Surface Area, Indefinite Integrals.
Week 7	Transcendental Functions Trigonometric Functions, Graphs, Derivatives of trigonometric functions, Inverse trigonometric functions, Graphs, Derivatives of Inverse trigonometric functions, Natural Logarithm Functions, Exponential Functions, Functions a^u and $\log_a u$.

Week 8	Complex Number Invented number systems, The Argand diagram. Addition, Subtraction, product, Quotient, Power and Roots. Demoivers theorem.
Week 9	Hyperbolic Functions Definition, Derivatives, Integrals, Inverse Hyperbolic Functions.
Week 10	Plane Analytic Geometry Circle, Parabola, Ellipse, Hyperbola
Week 11	Volume of Revolution Disk Method & Washer Method
Week 12	Volume of Revolution Volumes by Cylindrical Shells & solid with known cross sections
Week 13	Methods of Integrations Integration by substitution, Trigonometric Integrals & Quadratic Functions

Week 14	Methods of Integrations Integration by Parts, Integration by partial fractions, Integration of Rational Functions, improper integrals.
Week 15	Matrices and Determinates Definition, Properties of Matrices, Operations on Matrices, Determinants, Matrix Inverse, Solution of Linear Simultaneous Equations (Gramer's Rule).
Week 16	Preparatory week before the final Exam

Grading Scheme				
مخطط الدرجات				
Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX – Fail	راسب (تقيد المعالجة)	(45-49)	More work required but credit awarded
	F – Fail	راسب	(0-44)	Considerable amount of work required
Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Aims</p> <p>أهداف المادة الدراسية</p>	<ol style="list-style-type: none"> Good understanding of General Mathematics. To give information about Integrations and derivations and how they are used in the physics field. Helping students to connect mathematics with physics. solving mathematical examples in their physics modules. better understanding of integration and derivations and their importance of them in physics.
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>After successful completion of the module, students should be able to:</p> <ol style="list-style-type: none"> Work with functions represented in various ways: graphical, numerical, analytical, or verbal. They should understand the connections among these representations. The functions include linear, polynomial, absolute value, rational, exponential, logarithmic, trigonometric, inverse trigonometric, hyperbolic, inverse hyperbolic, and piecewise defined functions. Define and apply the concepts of limits and continuity to the mentioned functions and study them graphically and analytically. Understand the meaning of the derivative in terms of a rate of change and local linear approximation, and should be able to use derivatives to solve a variety of problems. Understand the meaning of the definite integral both as a limit of Riemann sums as the net accumulation of change and should be able to use integrals to solve a variety of problems. Understand the relationship between the derivative and the definite integral as expressed in both parts of the Fundamental Theorem of Calculus. Use various integration techniques to obtain anti-derivatives without an integral table or calculator.
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	<ul style="list-style-type: none"> Different forms of teaching will be used to come across with objectives of the course. PowerPoint presentations for the head titles, definitions, graphs, and many useful illustrations with a summary at the end of each chapter will be presented and discussed. The PowerPoint contains information about new topics and unsolved examples, and then the whiteboard will be used to solve them and to let students to see the solutions.

Module Aims, Learning Outcomes and Indicative Contents
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	<p>The course provides general information about physics and its branches, with a focus on the branches that are relevant to the study of civil engineering, such as classical mechanics and the laws and equations of motion. All phenomena in the natural world are measured in terms of a few fundamental relationships between measurable properties of matter and energy. These relationships are called the laws of physics, and they are formulas characterized by a high degree of generality, derived from a vast number of phenomena. The goal of physics can be summarized as expressing these fundamental relationships (these laws) in a mathematical form, enabling the student to use the logical rules of mathematics to apply the laws to specific cases and thus obtain quantitative results. Most physical laws are important in the field of civil engineering, which requires engineers to understand these laws to reflect them in the engineering reality related to mathematics, engineering foundations, fluid motion, hydraulic structures, and others.</p>
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<ol style="list-style-type: none"> 1- Clarifying the basic concepts of physics. 2- Acquiring skills in handling and understanding the laws of physics in a simplified manner. 3- Acquiring the essential skills as an introduction to the physical properties necessary to describe all physical measurements, called dimensions, which are length, mass, time, temperature, electric current, number of particles, and luminous intensity. And deriving other physical quantities such as force, energy, and momentum from these seven basic dimensions. 4- The ability to know and understand the science of physics. 5- The ability to think about solving any problem. 6- Writing scientific reports. 7- The ability to gain experience in dealing with physical quantities.

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX – Fail	راسب (فقد المعالجة)	(45-49)	More work required but credit awarded
	F – Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	The aims of a general Dynamics mechanics course/module typically include: 1. The student acquires the skill of dealing with engineering mechanics, as it is one of the scientific engineering foundations involved in most practical fields.

	<p>2. Clarify the concept of kinesiology and its applications.</p> <p>3. The course aims to give the student a new background that he can use to solve most of the engineering problems that he encounters in this field.</p> <p>4. The student learns about some mechanical equipment and how to deal with it through engineering workshops.</p>
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>The specific learning outcomes of a general dynamics mechanics course/module may vary depending on the institution and the level of the course, but some common examples include:</p> <p>1 Knowledge and Understanding</p> <p>2. Clarify the basic concepts of engineering mechanics through lectures and practical exercises.</p> <p>3 Expand the students' perceptions and enhance the concept of mechanics by giving them general principles and concepts about static forces, torque distribution, friction and moment of inertia.</p> <p>4. Working on some mechanical equipment in the engineering workshops.</p>
Subject-specific skills	<p>1. a detailed study of mechanics.</p> <p>2. Study the mathematical details that the student needs during their studies of engineering mechanics.</p> <p>3. Preparing the student to be successful by learning the correct principles related to this science.</p>
Assessment methods	<p>☐ Interaction within the lecture</p> <p>☐ Homework</p> <p>☐ laboratory reports</p> <p>☐ short quizzes (kuzat)</p> <p>☐ semester and final exams</p>
Thinking Skills	<ul style="list-style-type: none"> • Attention: Arousing the students' attention by addressing one of the applied topics on the display screen in the hall • Response: Follow up the student's interaction with the material displayed on the screen • Attention: Follow up on the interest of the student who interacted more with the presented material, by increasing this interaction by requesting related topics and applications to be presented.

	<ul style="list-style-type: none"> • Forming the direction: meaning that the student is sympathetic to the presentation and may have an opinion about the direction of the presented topic and defend it. • Formation of value behavior: meaning that the student reaches the top of the emotional ladder, so he has a stable level in the lesson and does not become lazy or fidgety.
General and Transferable Skills (other skills relevant to employability and personal development)	<ul style="list-style-type: none"> • Develop the student's ability to perform the duties and deliver them on time • Logical and scientific thinking to find solutions to various obstacles • Develop the student's ability to dialogue and discussion • Develop the student's ability to deal with modern technology, especially the Internet

Teaching and Learning Methods	
	<p>The learning and teaching strategies used in a general Dynamics mechanics /module will depend on the level of the course, the institution offering it, and the specific needs and goals of the students. However, some common strategies that may be used to facilitate learning and understanding of the subject matter include:</p> <ol style="list-style-type: none"> 1. Using modern means in presenting the scientific and theoretical side, such as Data Show devices, to attract attention and attract students, so that the idea can be better delivered to the student. 2 Giving students extra-curricular assignments that require them to exert skills and self-explanations in experiential ways. 3. Interrogation of students through discussion sessions by asking thinking questions (how, why, when, where, which) for specific topics. 4 Using the method of brainstorming and feedback in order to activate the accumulated experiences of students by linking what has been taken from study materials in the previous academic stages and linking them with the new ones. 5 Providing students with practical skills through conducting practical experiments on laboratory equipment.

Infrastructure	
Required reading: CORE TEXTS	1- Vector Mechanics for Engineers – Statics & Dynamics, Beer & Johnston; 10 edition.

COURSE MATERIALS OTHER	2- Engineering Mechanics Statics Vol. 1, Engineering Mechanics Dynamics Vol. 2, Meriam & Kraige; 6th edition
Special requirements (include for example workshops, periodicals, IT software, websites)	Engineering Mechanics – Statics, lectures by instructor, R. Ganesh Narayanan. Engineering Mechanics – Dynamics, lectures by instructor, Y. Wang. Lectures of other instructors in the department. Any other references in this field.
Community based facilities (include for example, guest Lectures, internship, field studies)	1. books, resources and articles published on various websites

Grading Scheme مخطط الدرجات				
Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX – Fail	راسب (فقد المعالجة)	(45-49)	More work required but credit awarded
	F – Fail	راسب	(0-44)	Considerable amount of work required
Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	<p>1. Stratigraphy Gives students Techniques For Working Out Earth History, It Integrates Diverse Materials Into A Coherent View Of How The Earth And Its Life Forms Evolved.</p> <p>2. Though Stratigraphy (Literally Writing About Strata) Is Mostly About Working Out The History Of Sedimentary Rocks, In Order To Do This You Also Need To Know The Effects Of Magmatism, Metamorphism, Tectonism, Climatic Change, And Sea-level Changes, And the Effects of Organic Evolution.</p> <p>3. Stratigraphy Integrates Data And Concepts from Many Specialties, And In Practice ends up as a much more comprehensive study than its name Implies.</p> <p>4. Stratigraphy also lets you test ideas on how varying combinations of processes affect the planets through Time. for example, As Evidence For Continental Drift And Changing Climates, Wegener (1915) Used The Presently Separated Positions Of Carboniferous Mosasaurs-bearing And Glacial Sediments, Which Were Most Plausibly Explained By An Originally Compact Supercontinent.</p> <p>5. Together, History And Process Let You Work Out How, When, And Why Environments Changed Through Time.</p>
---	--

	<p>6. Stratigraphy, Perhaps Most Importantly, Also Helps You To Understand How Many Economic Materials Formed And Got Distributed In The Way They Did – And So Will Hopefully Help You Find More. For Example, The Wembley Field Is One Of Many Isolated Oil And Gas Reservoirs In The Middle Triassic In Alberta, Canada.</p> <p>7. Finding Out Why The Oil Is There, And Where Other Similar Oil And Gas Fields Are, Requires You To Proceed Logically Through The Various Phases Of Stratigraphy.</p> <p>First, What Are The Actual Oil-bearing Rocks And How Were They Deposited? The Local (Borehole) Sections Mostly Consist Of Porous Sands Alternating With Clays Arranged In Coarsening-upwards Cycles, Deposited By Waves And Currents As Marine Barrier Island Deposits. Second, How Are These Sediments Arranged Spatially And How Old Are They? In The Absence Of Outcrops, Space Correlations Have To Be Worked Out From Borehole Logs And Seismic Sections Which Show The Arrangement And Thickness Of The Strata And Environments And That The Productive Oil And Gas Wells Are In Linear Sand Bodies Of a Particular Type Of Marine Barrier Bar.</p> <p>8. Identify the stratigraphic column of Iraq.</p> <p>9. Understand the basic definitions of stratigraphy and sedimentology.</p> <p>10. Identify the economic formation southern Iraq.</p>
Module Learning Outcomes	<p>1. Describe the stratigraphic column of Iraq.</p> <p>2. List the various terms associated with stratigraphy, sedimentology and sequence stratigraphy.</p>

<p>مخرجات التعلم للمادة الدراسية</p>	<ol style="list-style-type: none"> 3. Summarize what is meant by a basic sequence stratigraphy. 4. Discuss the relationships between the stratigraphic units. 5. Describe the stratigraphic units. 6. Define tectonostratigraphic. 7. Identify the sedimentary environments. 8. Discuss the stratigraphic relationships. 9. Discuss the various mechanism of sedimentation. 10. Explain the concepts of sequence stratigraphy. 11. Describe the main formations in Iraq.
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<p>Indicative content includes the following. Part A – STRATIGRAPHIC PRINCIPLES.</p> <p>Sedimentary rocks important</p> <p>Strata & Stratification</p> <p>Explain stratigraphic Units types.</p> <p>Name the stratigraphic units.</p> <p>Stratigraphy Committee.</p> <p>Tectonics & Tectonostratigraphic of Arabian Plate. Clarification of the stages of development of the Arabian plate during geological time.</p> <p>Using the drawing process to understand the rock sequences in Iraq.</p> <p>The use of software in the task mapping process. Part B – SEQUENCE STRATIGRAPHY CONCEPTS.</p> <p>Understand the basic definitions of sequence stratigraphy</p> <p>Drawing sequence stratigraphic sections.</p> <p>Using the concepts of sequences stratigraphy in the investigation of oil traps</p>

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	<p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> <p>One of the strategies for this course is to give the student an idea of the stratigraphic column in southern Iraq and the oil-producing rock formations, and Identify the economic formation southern Iraq. In addition to Identify the main oilfields in Iraq.</p>
